To the reader

This codebook is part of the data FSD1182 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

Ministry for Foreign Affairs of Finland: Development Cooperation Survey 2001 [dataset]. Version 2.0 (2018-08-08). Finnish Social Science Data Archive [distributor]. <http://urn.fi/urn:nbn:fi:fsd:T-FSD1182>

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

Fields of Science Classification: social sciences

CESSDA Classification: international politics and organisations

Series description

The data belong to the series:

Development Cooperation Surveys

Development Cooperation Surveys are commissioned by the Ministry for Foreign Affairs of Finland and study citizens' opinions, attitudes and information needs connected with development cooperation. The data collection has been conducted by Taloustutkimus. The survey series was launched in 1997.

Abstract

The survey charted Finnish opinion on the country's development co-operation, its objectives, allocation and successfulness. Respondents were asked which geographical areas of the world they think should be the main targets of the co-operation and why. Views on the most important goals and fields for Finland's co-operation were probed. Opinions on the future of African countries and the relationship between Finland's foreign policy and development co-operation policy were canvassed. Some questions pertained to the sources of information on development cooperation and the reliability of information given by Finnish authorities.

Respondents were asked whether they know how much money Finland spends on development co-operation annually (as per cent of the GNI) and how much should be spent. Opinions on the efficiency of development cooperation were charted. One theme covered satisfaction with disaster relief given by Finland. Respondents also evaluated the development co-operation of non-governmental organizations, compared to that of the government. Opinions on whether development co-operation should be bilateral or multilateral and how ethically Finnish firms should act in developing countries were investigated. Respondents were asked about Tobin's tax proposal (tax on international financial transactions). Respondents' contacts with developing countries were charted.

Background variables included respondents' age group, sex, economic activity, occupation, marital status, education, occupation of the household member with highest income, household monthly gross income, household size and composition and regional variables. There were several variables connected to respondents' television watching, Internet use, voting preferences, which newspapers and magazines they read regularly, which shops they use for everyday shopping and ownership of a car, summer cottage, mobile phone, house/apartment, personal computer etc.

1.3 Structure and collection of the data

Country: Finland

Geographic coverage: Finland

Analysis or observation unit type: Individual

Universe: Finnish population aged 15-74, excluding the Åland Islands

Collection date: 30.3.2001 – 25.4.2001

Data collector(s): Taloustutkimus

Data producer(s): Ministry for Foreign Affairs of Finland. Department for International Development Cooperation

Mode of data collection: Face-to-face interview: Computer-assisted (CAPI/CAMI)

Type of research instrument: Structured questionnaire

Time period covered: 2001

Time method of the data collection: Longitudinal: Trend/Repeated cross-section

Number of variables and cases: The data contain 270 variables and 1008 cases.

Sampling procedure: Non-probability: Quota

A quota sample based on the national age, sex, region and municipality type distribution. Interviews were made in 106 localities, of which 50 were cities and 56 other types of municipalities.

1.4 Use of data

Data appraisal

The variable identifying municipality has been removed from the data.

1. Study description

Weighting

There are no weight variables in the data.

Restrictions

The dataset is (B) available for research, teaching and study.
