To the reader

This codebook is part of the data FSD2051 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

Series description

The data belong to the series:

University Student Health Surveys

The survey series charts the physical, mental and social health of undergraduate students of higher education institutions in Finland. Other main themes include health-related behaviour and associated attitudes, social relationships, studies and financing studies, opinions on and the use of student health services. In addition to core questions, each survey contains questions on particular themes. Surveys are conducted by the Finnish Student Health Service (FSHS) at four-year intervals. Data collection began in the year 2000.

Abstract

The health survey of university students charted the respondents' health, and factors influencing their health. Questions covered general state of health, possible illnesses and injuries, and use of medication. Mental health was investigated with the help of GHQ12 (General Health Questionnaire) and a screen test created by psychologist Salli Saari. The screen test focused on the respondents' relationships to their parents and friends, their sexuality, strengths, and skills.

Health behaviour was examined with questions pertaining to smoking, drug and alcohol use, nutrition and exercise. In relation to alcohol use, the respondents were asked how much and how often they drank alcohol, and whether drinking had ever prevented them from doing something planned or caused an accident. The questionnaire included an AUDIT-test (Alcohol Disorders Test). Eating habits were investigated with questions about the respondents' consumption of dairy and grain products, fruits, berries, vegetables, and sugary and fatty products. The respondents were also asked whether they were on a special diet. In addition, they evaluated their own

state of health. Participation in sports as well as the frequency of brushing teeth, using dental floss and eating xylitol chewing gum were charted.

The respondents were asked about feelings of loneliness and level of social interaction. With regard to studies, they assessed whether their area of study was the right one for them, when they were going to graduate, who had given them study guidance and how satisfied they had been with the guidance. The respondents' financial circumstances and participation in paid employment were studied.

Attitudes to health issues were charted by asking whether there should be legislation regulating smoking in the workplace, alcohol selling in retail shops, cannabis use, or alcohol use in public places etc. The respondents were asked whether health professionals had advised them to change their lifestyle, and whether the doctor's instructions had helped them to do so. The most important sources of health-related information were also surveyed.

Finally, the respondents' use of health services was investigated. Visits to student, occupational, military, public or private health service units were studied, and respondents evaluated the quality of service and care they had received at the Finnish Student Health Service (FSHS). Reasons for using other services than those provided by the FSHS were studied. Need for the help of health services in certain issues (e.g. stress management, self-esteem, nutrition) was charted.

Background variables included the respondent's gender, year of birth, year of beginning studies, location of university, and area of study.

The study was funded by the research and development fund of the Finnish Student Health Service.

1.3 Structure and collection of the data

Country: Finland

Geographic coverage: Finland

Analysis or observation unit type: Individual

Universe: Finnish undergraduate students aged under 35 in universities

Collection date: February 2000 – September 2000

Data collector(s): Kunttu, Kristina (Finnish Student Health Service); Huttunen, Teppo (Clinical Research Services Turku)

Data producer(s): Finnish Student Health Service; Ministry of Education; Student Research Foundation; Pro Sanitate Studiosorum Foundation

Mode of data collection: Self-administered questionnaire: Paper

Type of research instrument: Structured questionnaire

Time period covered: 2000

Time method of the data collection: Longitudinal: Trend/Repeated cross-section

Response rate: 63.1

Number of variables and cases: The data contain 353 variables and 3174 cases.

Sampling procedure: Probability: Systematic random

Systematic sampling. The sample was selected from the customer register of the Finnish Student Health Service among students whose addresses were known and who lived in Finland. Sample size was 5,030, out of which 2,321 were men and 2,709 women.

Follow-up mailings were sent three times. 3,174 questionnaires were returned.

Data sources: Background variables were obtained from the customer register of the Finnish Student Health Service.

1.4 Use of data

Data appraisal

Variable identifying municipality was removed from the data, and values in variables bv2 and bv3 (birth year, year of starting studies) were categorised. Largest values in the 'number of children' variable (q77) were top-coded (2 and over). The variables 'height' and 'weight' were coded into separate variables for men and women (q8a/b, q9a/b) and values were top- and bottom-coded. Some of the open-ended variables were removed. Identifiers were removed from the remaining open-ended variables. Anonymisations carried out at FSD were marked with [square brackets].

YLIOPPILAIEN TERVEYDENHOITOSÄITIÖ
STUDENTERNAS HÄLSOVÄRDSTIFTELSE

OPISKELIJATERVEYSTUTKIMUS

Hyvä opiskelija

Ylioppilaiden terveydenhoitosäätiö (YTHS) vastaa korkeakouluopiskelijoiden terveydenhuollosta Suomessa. Voidakseen kehittää terveydenhoitopalvelujaan YTHS tarvitsee ajankohtaista tietoa terveyden kannalta tärkeistä asioista.

Kyselylomakkeessa on perinteisiä terveyden ja terveystyttymisen kysymyksiä, mutta siinä kartoitetaan myös muita elämän alueita, jotka kokemuksemme mukaan liittyvät läheisesti opiskelijan terveyteen ja jaksamiseen.

Kyseessä oleva tutkimus on valtakunnallinen käsittäen kaikki korkeakoulupaikkakunnat Suomessa. Kaikki antamasi tiedot ovat luottamuksellisia ja tulevat vain tutkijoiden käyttöön. Tutkimustulokset käsitellään tilastollisina kokonaisuuksina; yksittäistä vastaajaa ei niistä voi tunnistaa.

Tutkimuksen onnistumisen kannalta on ensiarvoisen tärkeää, että osallistut kyselyyn. Näe siis pieni vaiva ja vastaa! Lomake palautetaan Ylioppilaiden terveydenhoitosäätiölle oheisessa kirjekuoreessa, vastaanottaja maksaa postimaksun.

Tutkimusta koskeviin tiedusteluihin vastaa lääket. tri Kristina Kunttu, puh. (02) 2747 200, sähköp. kristina.kunttu@yths.fi.

Yhteistyöstä kiittäen

Ylioppilaiden terveydenhoitosäätiö

Vastaajakilpailu:

Kyselyyn vastanneiden kesken arvotaan 60 kappaletta Finnkinon 5 elokuvan sarjalippua. Jos haluat osallistua arvontaan, täytä oheinen lipuke ja laita se vastauslomakkeen mukana palautuskuoreen.

Arvonta suoritetaan 31.3.2000. Arvontaan osallistuvat kaikki täytettyjen lomakkeiden myötä siihen mennessä palautetut lipukkeet.

Palkinnot toimitetaan suoraan voittajille.

Vastausohjeet:

Ympyröi Sinun vastaustasi parhaiten kuvaavan vaihtoehdon numero tai kirjoita kysytty tieto sitä varten varattuun tilaan.

Ympyröi kunkin vaihtoehdon kohdalla vain yksi numero, ellei toisin ole mainittu.

Vastauksiin toivotaan tietoa siitä, miten yleensä toimit, ellei kysymyksessä toisin ole mainittu.

Lue ennen vastaamistasi koko kysymys.

UNDERSÖKNING AV STUDENTERNAS HÄLSA

Bästa studerande

Studenternas hälsovårdsstiftelse (SHVS) ansvarar för högskolestuderandenas hälso- och sjukvård i Finland. För att kunna utveckla sina hälsovårdstjänster behöver SHVS aktuell information om faktorer som är viktiga för hälsan.

I enkäten ingår vid sidan av traditionella frågor om hälsa och hälsobeteende även frågor som kartlägger andra sådana områden i livet som vi av erfarenhet vet att är av betydelse då det gäller studenternas hälsa och förmåga att orka studera.

Undersökningen är riksomfattande och inbegriper samtliga högskoleorter i Finland. Alla uppgifter som du lämnar behandlas konfidentiellt och kommer endast att utnyttjas av forskare. Forskningsresultaten behandlas som statistiska helheter; enskilda personer kan inte identifieras.

För att undersökningen skall lyckas är det av största vikt att också du deltar. Vänligen gör dig litet besvär och svara! Sänd in blanketten till Studenternas hälsovårdsstiftelse i det bifogade kuvertet. Mottagaren betalar portot.

Frågor som gäller undersökningen besvaras av med. dr. Kristina Kunttu, tfn (02) 2747 200, e-post kristina.kunttu@yths.fi.

Med tack för visat samarbete

Studenternas hälsovårdsstiftelse

Utlottning bland dem som svarat:

Bland dem som svarar på enkäten lottar vi ut 60 seriebiljetter för 5 filmer på Finnkino. Om du vill delta i utlottningen skall du fylla den bifogade kupongen och sända in den tillsammans med svarsblanketten.

Lottdragningen sker 31.3.2000. I utlottningen deltar alla kuponger som före nämnda datum har sänts in tillsammans med de ifyllda blanketterna.

Priserna tillsänds vinnarna direkt.

Anvisningar:

Ringa in siffran på det alternativ som bäst motsvarar ditt svar eller skriv svaret i det utrymme som reserverats.

Ringa in endast en siffra, om det inte sägs något annat.

Om inget annat sägs, vill vi veta hur du agerar i allmänhet.

Läs hela frågan innan du besvarar den.
