To the reader

This codebook is part of the data FSD2078 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

Series description

The data belong to the series:

EVA Surveys on Finnish Values and Attitudes

Since 1984, the Finnish Business and Policy Forum (EVA) has conducted biennial surveys studying changes in Finnish attitudes, values, and perceptions of the present and the future. The series, formerly known as Finnish National Attitudes, aims at measuring and analysing citizens' views on Finnish society. The data allow a detailed empirical analysis and systematic follow-up of change in public opinion. Each dataset contains both new themes and recurring themes with questions repeated over the years.

Themes covered include democracy, market economy, welfare, environment, society and politics, Finland's international position, economic depression, economic growth, Finnish identity, and views on the future. The surveys are funded by EVA and have usually been carried out by Yhdyskuntatutkimus. The FSD collections also include surveys on values and attitudes of corporate executives (for example, FSD1091), in which some of the questions presented in this series have been repeated.

Abstract

The survey charted Finnish attitudes and values. Respondents were presented with a series of attitudinal statements covering political parties, occupational life, market economy, economic growth, social welfare, environmental issues, immigration, emigration and internal migration, foreigners, internationalism, Finland's NATO membership, taxation, democracy and Finnish political life. Respondents were asked about entrepreneurship and what kind of characteristics business and political leaders should have.

Respondents' views on the importance of different factors of happiness were studied. They were asked how happy they are and what their financial circumstances are. Opinions on Finland's competitiveness in international markets, EU membership, the replacement of Finnish Mark with Euro and EU's enlargement to the Baltic States and Eastern Europe were queried

on. Background variables included respondent's gender, age, size of municipality, type of residential area, region of residence, occupational group, trade union membership, political party preference, basic and vocational education, employment sector and self-designated social class.
