# To the reader

This codebook is part of the data FSD2122 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

TNS Gallup Finland & Helsingin Sanomat: Finnish 2006 Presidential Election Survey: Candidate Choice and Profiles [dataset]. Version 2.0 (2018-07-19). Finnish Social Science Data Archive [distributor]. <http://urn.fi/urn:nbn:fi:fsd:T-FSD2122>

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

## **Date of deposit**

30.11.2005

## **Keywords**

elections; leadership; personality; personality traits; political leaders; presidential candidates; presidential elections; tolerance; voting; voting behaviour

## **Topic Classification**

**Fields of Science Classification:** social sciences

**CESSDA Classification:** elections; political behaviour and attitudes

## **Series description**

The data belong to the series:

Individual datasets

Individual datasets that do not belong to any series.

## **Abstract**

The data, which were collected just before the 2006 presidential elections, charted how much goals and personal qualities influence candidate selection and what kind of images respondents had of the candidates. The respondents were asked to evaluate, for example, which candidates promoted the consolidation of the welfare state, defended human rights and social equality, were against joining Nato, had too positive a view on globalisation or the European Union military alliance, had too cautious or audacious a stance on foreign policy or were forging closer ties with the United States and Russia. The respondents rated the candidates' leadership qualities, such as expertise in foreign policy, humanity, ability as a public performer, broadmindedness, reliability, justness, ability to function under pressure, far-sightedness, and strength. The respondents were also asked how important it was in choosing a candidate that the president defends human rights and social equality in Finland and on a global scale, approves or disapproves of Nato membership, takes a critical or an open attitude to globalisation, wants to reduce presidential powers, supports the enlargement of the EU, aims to increase the resources of Finnish national defence, and meets ordinary Finnish citizens often. The respondents assessed how much candidates' characteristics affected their voting decision. The characteristics included gender, expertise, humanity, party allegiance, elegance, patriotism, determination, tolerance, reliability, irreproachability, justness, and Christian beliefs.

Background variables included the respondent's year of birth, gender, basic and vocational education, occupational group, occupational group of household head, industry of employment, trade union membership, voting behaviour, left-right political self-placement, municipality type, and province and county of residence.

## 1.3 Structure and collection of the data

**Country:** Finland

**Geographic coverage:** Finland

**Analysis or observation unit type:** Individual

**Universe:** People aged between 18 and 74 living in Finland, excluding the Åland Islands

**Collection date:** 14.10.2005 – 26.10.2005

**Data collector(s):** TNS Gallup Finland

**Data producer(s):** TNS Gallup Finland

**Mode of data collection:** Face-to-face interview: Computer-assisted (CAPI/CAMI)

**Type of research instrument:** Structured questionnaire

**Time period covered:** 2005

**Time method of the data collection:** Cross-section

**Number of variables and cases:** The data contain 323 variables and 1232 cases.

**Sampling procedure:** Probability: Multistage

Multistage stratified sampling resulting in a fixed sample. The data have been collected with the help of GallupChannel telepanel (PCs and Internet terminals in respondent households).

## 1.4 Use of data

### Data appraisal

The data were collected in two parts in consecutive weeks. Questions relating to important goals in presidential work and important characteristics in choosing a president (variables beginning with q3 and q4) and respondents' voting preferences (variables beginning with q5) were asked between 14 and 19 October 2005. Qualities and characteristics of the candidates (variables beginning with q1 and q2) were surveyed between 21 and 26 October 2005.
