To the reader

This codebook is part of the data FSD2133 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

Series description

The data belong to the series:

ISSP (International Social Survey Programme)

ISSP is a continuous programme of cross-national collaboration on social science surveys. It is based on annual, internationally integrated surveys carried out in all participating countries. A self-financed consortium of various research institutions is in charge of the programme. The ISSP data collection started in 1985, and in Finland in 2000, along with the national membership.

The GESIS in Germany is responsible for archiving the ISSP data. Country-specific codebooks and questionnaires can be found on the GESIS ISSP web pages. ZACAT, the data portal of the GESIS, offers information on ISSP surveys, with online retrieval, analysis and download. Their Data Catalogue DBK allows retrieval and download of data and questionnaires. Both services are free of charge but downloading requires registration. The ZACAT registration is valid for DBK and vice versa.

In Finland, ISSP surveys are carried out in collaboration by three institutions: Finnish Social Science Data Archive, Faculty of Social Sciences at the University of Tampere, and the Interview and Survey Services of Statistics Finland.

Abstract

The survey charts Finnish attitudes to work. All respondents were asked on what areas of life they would like to spend more and less time. Their opinions on the importance of different

factors in their job and preferred employer and employment situation were studied. Respondents were also presented with attitudinal statements about work.

Respondents who were in gainful employment were asked whether they wanted to lengthen or shorten their working hours, did they suffer from burn-out and were they able to organise daily work tasks themselves. Respondents' views on the importance of different aspects in a job were examined, such as job security, high income, opportunities for advancement and a job that allows someone to work independently. Respondents were also asked how committed they feel to their job, how easy or difficult it would be to find a new job and how easy or difficult it would be for an employer to replace the respondent with a new employee. Their opinions on the possibility of finding a new job in another organisation and losing their present job were examined. Respondents were asked to what extent they use automatic data processing equipment at work and do they have a second job.

Respondents who were not in gainful employment were asked whether they had ever had a paid job for a year or longer, when their last gainful employment terminated and what was the main reason for the termination. Respondents' willingness to get a paid job and the likelihood of finding a new job were examined. Respondents' job searching methods, participation in further training of professional skills and main source of income were queried on.

Background variables included respondent's gender, year of birth, marital status, household size, education, economic activity, occupation, industry class, regular weekly working hours, employment type, managerial position, employer type, trade union membership, voting behaviour, religiosity, monthly income, subjective social class and type of location.

1.3 Structure and collection of the data

Country: Finland

Geographic coverage: Finland

Analysis or observation unit type: Individual

Universe: People aged between 15 and 74 living in Finland

Collection date: 14.9.2005 – 30.11.2005

Data collector(s): Statistics Finland

Data producer(s): University of Tampere. Department of Sociology and Social Psychology; Statistics Finland; Finnish Social Science Data Archive

Mode of data collection: Self-administered questionnaire: Paper

Type of research instrument: Structured questionnaire

Time period covered: 2005

Time method of the data collection: Longitudinal: Trend/Repeated cross-section

Response rate: 54%

Number of variables and cases: The data contain 134 variables and 1345 cases.

Sampling procedure: Probability: Systematic random

Classification order: municipality code and date of birth.

1. Study description

The sample size was 2,500 persons, out of which 94.8% were Finnish-speaking and 5.2% were Swedish-speaking. Seven persons lived abroad or their addresses were unknown. Therefore, the questionnaire was sent to 2,493 persons. 1,345 questionnaires were returned. There were 1,148 non-respondents, seven of them declined to answer.

Data sources: Variables denoting region of residence and language are based on register data.

Weighting

The data contain two weight variables, which were created using a calibration method in order to improve estimation efficiency and to correct non-response bias. The weights are based on the following population distributions: 1) gender, 2) age groups (15-24, 25-34, ..., 65-74), 3) NUTS3 areas so that Greater Helsinki area was treated separately, and 4) municipality type (urban, semi-urban, rural). The first weight variable (paino_1) weights the results to match the whole Finnish population (the sum of the weights equals to the size of the Finnish population). The second weight variable (paino_2) does not produce this kind of extension (the weighted mean is 1 and the sum equals to the number of cases). Both variables are based on the same calibration process, only the scale is different.

Restrictions

The dataset is (B) available for research, teaching and study.

Suomalaiset ja työ 2005

Arvoisa vastaanottaja!

Työ tai sen puute ovat ihmisen ja yhteiskunnan toiminnan ydinkysymyksiä. Tässä tutkimuksessa selvitetään suomalaisten suhtautumista työhön riippumatta siitä, ovatko he mukana työelämässä vai eivät. Aineisto on osa laajaa kansainvälistä tutkimusta, jossa suomalaisten käsityksiä verrataan muiden maiden kansalaisten mielipiteisiin. Tutkimuksen tuloksia tullaan hyödyntämään vastattaessa työelämän ajankohtaisiin haasteisiin.

Kattavan kuvan saamiseksi tutkimukseen on poimittu Tilastokeskuksen Suomen väestöä koskevasta tietokannasta satunnaisesti 2 500 henkilön otos 15 – 74-vuotiaista suomalaisista. Te olette yksi näistä satunnaisesti valituista henkilöistä.

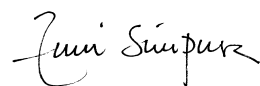

Suomen osalta tietojen keruusta vastaa Tilastokeskus. Tutkimus toteutetaan yhteistyössä Tampereen yliopiston kanssa. Ennen aineiston luovuttamista tutkijoille ja kansainväliselle tietoarkistolle, siitä poistetaan kaikki yksittäisen vastaajan tunnistamisen mahdollistavat tiedot. Tulokset julkaistaan tutkimusraporteina ja tilastotaulukkoina.

Pyydämme Teitä täyttämään kyselylomakkeen ja palauttamaan sen Tilastokeskukseen oheisessa kirjekuoressa 7.10.2005 mennessä. Palautuskuoren postimaksu on jo maksettu. Vastauksenne on tärkeä, sillä kyselyyn valittua ei voi korvata toisella henkilöllä.

Lisätietoja tutkimuksesta antaa Tilastokeskuksessa tutkija Markku Nieminen puh. (09) 1734 2519 tai sähköposti: markku.nieminen@tilastokeskus.fi sekä tutkimussihteri Riina Nyberg puh. (09) 1734 2480.

Yhteistyöstä etukäteen kiittäen!

Finländarna och arbetet 2005

Bästa mottagare!

Jobb och arbetsliv hör ju till det som ofta diskuteras i vårt samhälle. Men vad anser egentligen vanliga finländare i dessa frågor? Den här undersökningen är en del av en omfattande internationell undersökning, där finländarnas uppfattningar jämförs med uppfattningarna hos invånare i andra länder. Undersökningen omfattar både dem som deltar i arbetslivet och dem som inte gör det. Resultatet av undersökningen kommer att utnyttjas för att möta de aktuella utmaningarna i arbetslivet.

För att få en täckande bild av detta har 2 500 finländare mellan 15 och 74 år slumpmässigt uttagits ur Statistikcentralens databas över befolkningen i Finland. Ni är en av dessa slumpmässigt valda personer.

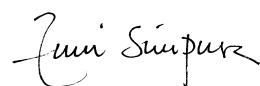

Statistikcentralen svarar för insamlingen av uppgifter i Finland. Undersökningen genomförs i samarbete med Tammerfors universitet (Tampereen yliopisto). Innan materialet överlämnas till forskarna och det internationella informationsarkivet raderas alla uppgifter som gör det möjligt att identifiera en enskild individ. Resultaten publiceras som forskningsrapporter och statistiska tabeller.

Vi ber Er fylla i frågeblanketten och återsända den till Statistikcentralen i det bifogade kuvertet före 7.10.2005. Portot är betalt. Ert svar är viktigt, eftersom en person som valts till enkäten inte kan ersättas med en annan person.

Mera information om undersökningen får Ni av forskare Markku Nieminen vid Statistikcentralen, tfn (09) 1734 2519 eller e-post: markku.nieminen@stat.fi och forskningssekreterare Riina Nyberg, tfn (09) 1734 2480.

Tack på förhand för samarbetet!
