To the reader

This codebook is part of the data FSD2503 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

Free-time Residence Barometers

The Free-time Residence Barometers chart the development of free-time residence use in Finland. In the barometers, the term "free-time residence" refers to rural recreational residences (holiday homes, cottages) mainly used during weekends and holidays, particularly in summer. The barometer was created in 2003 by the Island Committee of the Ministry of Agriculture and Forestry in Finland as a monitoring system to serve the development of leisure time housing. The barometers consist of a free-time residence user survey that charts, for example, the amount of time spent at the residence, remote working and commuting from the residence, money and service usage, equipment level, water supply, and waste disposal.

Abstract

The survey described Finnish leisure-time housing in 2008. The questions charted the use of the free-time residence, as well as its standard of equipment, water supply, sewerage, and waste disposal. In addition, some questions investigated the use of services in the municipality the free-time residence is located in. Leisure-time housing in Finland is a large phenomenon with deep historical and cultural roots, and it represents a significant part of domestic tourism. In this survey, the term "free-time residence" refers to rural recreational residences (holiday homes, cottages) mainly used during weekends and holidays, especially during summertime.

The use of free-time residence was charted by asking the respondents for example about the distance between their free-time residence and permanent residence in kilometres and hours, the location of their free-time residence, and its suitability for year-round habitation. They were also asked to indicate the number of days their free-time residence had been used each month in the last 12 months, as well as the number of people who had spent at least one night at the free-time residence. Willingness to rent out the free-time residence to other people was also queried. The respondents were asked to tell whether their use of free-time residence had increased or decreased in the last three years, and to estimate whether it will increase or decrease in the next three years. In addition, they were asked whether a household member had commuted to work from or worked at the free-time residence, and whether they themselves were willing to do remote work at the free-time residence.

Questions related to standard of equipment covered the total floorage, access to electricity, heating, and various equipment in the free-time residence. Views were also probed on the accommodation capacity, improvements made in the last 12 months, and future improvements. In addition, the respondents were asked to rate the overall state of the main building.

Water supply was investigated by asking the respondents how they obtained drinking, cooking, and washing water. In view of waste disposal, they were asked how they dealt with waste water from the sauna, what type of outdoor latrine they had, and how the waste disposal at the free-time residence was organised in general.

Related to services, the respondents were queried about the distance to the nearest grocery store, health centre, library, post office, bus stop, and post box. The respondents themselves as well as their household members were asked whether they had plans to officially move to the municipality their free-time residence was located in within the next three years. Satisfaction with various services available in the proximity of the free-time residence was canvassed, as well as willingness to buy various services. In addition, the respondents were asked whether they usually bought groceries and other goods and services from a store/company located in their municipality of residence, along the way, or in the municipality their free-time residence was located in.

Some questions charted the use of money. The respondents were asked about the average amount of money used per day spent at the free-time residence, and the amount of money used in building or repairing, other goods (e.g. fuel, furniture, gardening tools), and leisure time services in the last 12 months. In addition, the annual amount of various user charges related to the free-time residence (e.g. real property tax, private road fees, harbour and quay dues, and waste collection, electricity, waste water, and telephone charges) was examined.

Background variables included the respondent's household size and income, region where the free-time residence is located in, and year of construction of the free-time residence.

1.3 Structure and collection of the data

Country: Finland

Geographic coverage: Finland

Analysis or observation unit type: Household

Universe: 452,000 Finnish free-time residences included in the official register of free-time residences in 2007 and owned by private persons, excluding free-time residences with no owner information, and those owned by foreign owners or the heirs collectively

Collection date: October 2008 – December 2008

Data collector(s): Nieminen, Markku (Statistics Finland. Interview and Survey Services)

Data producer(s): Tilastokeskus. Haastattelu- ja tutkimuspalvelut; Työ- ja elinkeinoministeriö. Saaristoasiain Neuvottelukunta

Mode of data collection: Self-administered questionnaire: Paper

Type of research instrument: Structured questionnaire

Time period covered: 2008

1. Study description

Time method of the data collection: Longitudinal: Trend/Repeated cross-section

Response rate: 55.4

Number of variables and cases: The data contain 179 variables and 2629 cases.

Sampling procedure: Probability: Stratified

The target population consisted of the about 452,000 Finnish free-time residences owned by private persons in the Statistics Finland's register of free-time residences in 2007. The sample consisted of 5,000 free-time residences randomly sampled from all regions, according to their relative proportions of all free-time residences in Finland.

Weighting

There are two weight variables in the data, the increase weight (paino_1) and the analysis weight (paino_2). With weight variables, the sample can be weighted to correspond with the whole target population. If a case (free-time residence) in the data is, for instance, given a weight of 150, it represents 150 Finnish free-time residences. In addition, weighting can be used to partly correct non-response bias. Weighting has been carried out on the regional level, because the strata used in the sampling were formed from regions. The analysis weight is almost identical to the increase weight - it has only been scaled so that the sum of the weights is the number of accepted responses (2,629) and the mean of the weights is 1. One of the weight variables should always be used in tabulating the data.

Vapaa-ajan asuntojen käyttö

Arvoisa vastaanottaja

Pyydämme teitä osallistumaan valtakunnalliseen vapaa-ajan asuntojen käyttöä selvittävään tutkimukseen, niin sanottuun Kesämökkibarometriin. Edellinen Kesämökkibarometri tehtiin vuonna 2003 ja sai osakseen suurta mielenkiintoa tiedotusvälineissä. Myös kyselyyn vastanneet pitivät kysymyksiä erittäin mielenkiintoisina. Tuloksia käytetään hyväksi mm. pohdittaessa, miten vapaa-ajan asukkaiden tarvitsemia palveluja voitaisiin parantaa.

Tutkimukseen on poimittu Tilastokeskuksen kesämökkitalastoaineistosta satunnaisesti 5000 vapaa-ajan asuntoa. Omistaja- ja osoitetiedot on saatu Tilastokeskuksen Suomen väestöä koskevasta tietokannasta. Tietojen keruusta vastaa Tilastokeskus. Tutkimus toteutetaan yhteistyössä Työ- ja elinkeinoministeriön Saaristoasiain neuvottelukunnan kanssa.

Luottamuksellisuus

Aineisto käsitellään tilastollisin menetelmin, eikä yksittäisen henkilön vastauksia voi erottaa tuloksista. Kaikki yksittäisen vastaajan tunnistamisen mahdollistavat tiedot poistetaan ennen aineiston luovuttamista Tampereen yliopiston Yhteiskuntatieteelliseen tietoarkistoon.

Kyselyn lähettäminen

Pyydämme Teitä täyttämään kyselylomakkeen ja palauttamaan sen Tilastokeskukseen oheisessa valmiiksi maksetussa kirjekuoressa **6.11.2008** mennessä. Kaikkien vastanneiden kesken arvotaan 20 mökkitunnuksella varustettua T-paitaa.

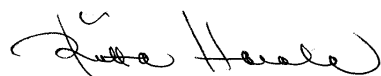

Mikäli ette itse lainkaan käytä vapaa-ajan asuntoanne, pyydämme teitä toimittamaan lomakkeen henkilölle, joka sitä pääasiassa käyttää.

Lisätiedot

Lisätietoja tutkimuksesta antaa Tilastokeskuksessa tutkija Markku Nieminen puh. (09) 1734 2519 tai sähköposti: markku.nieminen@tilastokeskus.fi

Yhteistyöstä etukäteen kiittäen,

Användningen av fritidsbostäder

Bästa mottagare

Det här är en landsomfattande undersökning som gäller användningen av fritidsbostäder och vi hoppas att Ni vill delta i den. Föregående undersökning genomfördes år 2003 och väckte stort intresse i medierna. Också de personer som deltog i enkäten upplevde frågorna som ytterst intressanta. Resultaten utnyttjas bl.a. när man funderar över olika förbättringar av de tjänster som behövs vid fritidsboende.

Undersökningen gäller ett slumpässigt urval om 5 000 fritidsbostäder som plockats ur Statistikcentralens statistikmaterial över fritidshus. Ägar- och adressuppgifterna har tagits ur Statistikcentralens databas över befolkningen i Finland. Statistikcentralen ansvarar för datainsamlingen. Undersökningen görs i samarbete med skärgårdsdelegationen vid arbets- och näringsministeriet.

Sekretess

Materialet behandlas med statistiska metoder och svaren från någon enskild person kan inte urskiljas i resultaten. Alla uppgifter som gör det möjligt att identifiera enskilda uppgiftslämnare tas bort innan materialet överläts till Finlands samhällsvetenskapliga dataarkiv vid Tammerfors universitet.

Återsändning av enkäten

Vi ber Er fylla i blanketten och återsända den till Statistikcentralen i det bifogade kuvertet före **6.11.2008**. Portot är betalt. Bland dem som svarat utlottas 20 T-skjortor med stugsymbolen.

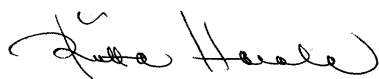

Om Ni själv inte alls använder Er fritidsbostad, vänligen vidarebefordra blanketten till den som huvudsakligen använder bostaden.

Ytterligare information

Ytterligare upplysningar får Ni vid Statistikcentralen av forskare Markku Nieminen tfn (09) 1734 2519 eller e-post: markku.nieminen@tilastokeskus.fi

Vi tackar för samarbetet!
