# To the reader

This codebook is part of the data FSD2722 archived at the FSD (Finnish Social Science Data Archive). The dataset has been described in as much detail as possible in Finnish and English. Variable frequencies, variable and value labels, and missing values have been checked. If necessary, the data have been anonymised. The data and its creators shall be cited in all publications and presentations for which the data have been used. The bibliographic citation may be in the form suggested by the archive or in the form required by the publication. The bibliographic citation suggested by the archive:

National Institute for Health and Welfare: Gambling Survey 2011 [dataset]. Version 3.0 (2018-07-26). Finnish Social Science Data Archive [distributor]. <http://urn.fi/urn:nbn:fi:fsd:T-FSD2722>

The user shall notify the archive of all publications where she or he has used the data. The original data creators and the archive bear no responsibility for any results or interpretations arising from the reuse of the data.

The codebook contains information on data content, structure and data collection, and includes a list of publications wholly or in part based on the data, according to publication information received by the FSD. The second part of the codebook contains information on variables: question texts, response options, and frequencies. The third part contains indexes.

Variable distributions presented in this codebook have been generated from the SPSS files. Distribution tables present variable values, frequencies (n), frequency percentages (%), and valid percentages (v. %) which take into account missing data. All distributions are unweighted. If the data contain weight variables, these will be found at the end of the variables list. In some cases frequency distributions have been substituted by descriptive statistics. Categorised responses to open-ended questions are not always included in the codebook. Distributions may contain missing data. The note "System missing (SYSMIS)" refers to missing observations (e.g. a respondent has not answered all questions) whereas "Missing (User missing)" refers to data the user has defined as missing. For example, the user may decide to code answer alternatives 'don't want to say' or 'can't say' as missing data.

The codebook may contain attached files, the most common one being the questionnaire.

## Series description

The data belong to the series:

Finnish Gambling Surveys

The gambling surveys, commissioned by the Ministry of Social Health and Health, chart Finnish gambling behaviour, attitudes to gambling and problem gambling. The surveys use a modified South Oaks Gambling Screen (SOGS). Data are collected every four years.

## Abstract

The survey charted Finnish gambling habits, frequency of gambling, amount of money gambled and views on problem gambling. The term gambling is used here as an umbrella term for lotteries, slot machines, betting, bookmaking, the pools, roulette wheels, and card and dice tables as well as online variations of all of these.

The first section of the survey focused on gambling games in general. The respondents were presented with a list of various games (e.g. lotto games and scratchcards of Veikkaus, the National Lottery of Finland, games of chance in a casino and slot machines of Finland's Slot Machine Association, RAY) and asked whether they had played them during the past 12 months or before. Other questions charted online gambling, the gambling websites visited, frequency of gambling activities, and money and time spent on gambling in the previous 30 days. The respondents were asked to estimate the average weekly sum spent on gambling, the largest win in the previous 12 months, their age and the game played when they gambled for the first time.

The second section covered perceptions on gambling. The respondents were asked whether they thought gambling was a problem in Finland, whether the problems associated with gambling had increased or decreased and if the government monopoly and the age limit of 18 were effective ways of limiting problem gambling. The respondents were asked to what extent they agreed with statements relating to gambling, such as "people should have the right to gamble whenever they want" and "gambling is detrimental to family life."

In the third section, the respondents' Internet use and habits of playing non-gambling games were charted. Questions covered whether they had an Internet connection, how many hours not relating to work they had spent on the Internet in the previous 7 days, whether they played video games and how many hours they had played them in the previous week and month.

The respondents' relation to gambling was examined. They were asked how often they returned another day to try to win back the money they had lost, whether they had claimed to be winning while gambling even though they were actually losing money, whether they had gambled more than they intended to, and whether people had criticised their gambling or told them they had a gambling problem. Some questions explored whether the respondents had felt guilty while

gambling, whether they had wanted to stop betting money or gambling but could not do so, and whether they had hidden their gambling from their family members. Some questions covered arguments with the people the respondents lived with over how the respondents handled money and whether those arguments had centred on their gambling.

Other topics included whether the respondents had borrowed from someone and not paid them back as a result of their gambling, whether they had lost time from work or school due to betting or gambling, and whether they had borrowed or acquired money to gamble or to pay gambling debts. Finally, opinions were probed on whether the respondents themselves gambled or had gambled too much, whether they had gambled money borrowed for other purposes and whether they had tried to seek help for gambling addiction. Most of the questions in this section focused on the circumstances in the previous 12 months.

The final section pertained to health and welfare. The respondents were asked to estimate their current status of health and how often they had felt nervous, calm, despondent and happy in the previous four weeks. They were also asked if they had, in the previous 12 months, had periods during which they had been discouraged, sad or depressed, or lost their interest in things that they usually found pleasing. Smoking and alcohol use were charted.

Background variables included the respondent's gender, year of birth, marital status, number of years studied, monthly net income and employment status.

## 1.3 Structure and collection of the data

**Country:** Finland

**Geographic coverage:** Finland

**Analysis or observation unit type:** Individual

**Universe:** People aged 15-74 living in Finland, excluding Åland Islands

**Collection date:** 3.10.2011 – 14.1.2012

**Data collector(s):** Taloustutkimus

**Data producer(s):** National Institute for Health and Welfare

**Mode of data collection:** Telephone interview

**Type of research instrument:** Structured questionnaire

**Time period covered:** 2011

**Time method of the data collection:** Longitudinal: Trend/Repeated cross-section

**Number of variables and cases:** The data contain 176 variables and 4484 cases.

**Sampling procedure:** Probability: Simple random

A random sample of 16,000 persons drawn from the population register. The sample was delivered to Taloustutkimus, which commissioned DirektMedia 121 to form a separate register out of those individuals for whom a phone number was found. Phone numbers were found for 11,129 individuals.

Before the interviews, Taloustutkimus sent a letter to all the persons included in the original sample, informing them of the study. Those for whom a phone number had not been found,

were invited to participate by leaving their contact information to Taloustutkimus. 120 persons did so (119 eventually participated in the study). The total number of respondents (i.e. the number of completed interviews) was 4,484 persons.

## Hyvä vastaanottaja

**Terveyden ja hyvinvoinnin laitos** tutkii puhelinhaastattelujen avulla suomalaisten rahapelaamista ja terveyttä. Haastateltaviksi on valittu satunnaisesti 16 000 henkilöä Väestörekisteristä.

### Te olette yksi mukaan valituista.

**Tutkimukseen osallistuminen on vapaaehtoista**, mutta tutkimuksen kattavuuden ja luotettavuuden kannalta kaikkien tutkimukseen valittujen vastaukset ovat tärkeitä. Teidän antamianne tietoja käsitellään ehdottoman luottamuksellisesti ja nimettöminä. Tulokset esitetään taulukkoina, joista kenenkään henkilökohtaisia vastauksia ei voida jäljittää.

**Vaikka ette itse pelaisi lainkaan rahapelejä**, tutkimuksen onnistumisen kannalta on tärkeää, että osallistutte haastatteluun. Tutkimuksessa saadaan tärkeää uutta tietoa suomalaisten suhteesta rahapelaamiseen.

**Puhelinhaastattelut tekee Taloustutkimus Oy.** Teille tullaan soittamaan lähiaikoina 010 -alkuisesta puhelinnumerosta. Kun vastaatte puheluun, Taloustutkimuksen haastattelija kertoo teille lisää tutkimuksesta.

### Teillä on mahdollisuus keskeyttää haastattelu missä vaiheessa tahansa.

**Suomalaisten aikuisten rahapelaamista** on tutkittu aikaisemmin vuosina 2003 ja 2007. Voitte tutustua vuoden 2007 raporttiin internetissä osoitteessa: [http://info.stakes.fi/NR/rdonlyres/82EFAC39-7AEC-4EA9-A3C4-BB57D35A07B70/Suomalaisten\\_rahapelaaminen\\_2007\\_tekstiraportit5046.pdf](http://info.stakes.fi/NR/rdonlyres/82EFAC39-7AEC-4EA9-A3C4-BB57D35A07B70/Suomalaisten_rahapelaaminen_2007_tekstiraportit5046.pdf)
