Lukijalle

Tämä koodikirja on osa Tietoarkistoon arkistoitua tutkimusaineistoa FSD3288. Aineisto on kuvailtu mahdollisimman yksityiskohtaisesti suomeksi ja englanniksi. Datatiedostosta on tarkistettu muun muassa muuttujien jakaumat, puuttuvat tiedot, muuttujien selitteet ja arvojen selitteet. Tarvittaessa datatiedosto on anonymisoitu. Aineistoon ja sen tekijöihin tulee viitata asianmukaisesti kaikissa julkaisuissa ja esityksissä, joissa aineistoa käytetään. Tietoarkiston antaman malliviittaustiedon voi merkitä lähdeluetteloon sellaisenaan tai sitä voi muokata julkaisun käytäntöjen mukaisesti. Malliviittaus:

Nikula, Jouko (Helsingin yliopisto): Yhteiskunnalliset erot nyky-Venäjällä 2015 [sähköinen tietoaaineisto]. Versio 1.0 (2020-07-10). Yhteiskuntatieteellinen tietoar- kisto [jakaja]. <http://urn.fi/urn:nbn:fi:fsd:T-FSD3288>

Tietoarkistoon on lähetettävä viitetiedot kaikista julkaisuista, joissa käyttäjä hyödyntää aineis- toa. Aineiston alkuperäiset tekijät ja tietoar- kisto eivät ole vastuussa aineiston jatkokäytössä tuo- tetuista tuloksista ja tulkinnoista.

Koodikirjan alussa on tiedot aineiston sisällöstä, aineiston rakenteesta ja keruusta sekä luettelo tietoar- kistoon ilmoitetuista julkaisuista, joissa aineistoa on hyödynnetty. Toinen osa sisältää tiedot muuttujista: muuttujien nimet, kysymystekstit ja suorat jakaumat. Kolmannesta osasta löytyvät hakemistot.

Tässä koodikirjassa esitetyt muuttujien jakaumat on tuotettu SPSS-tiedostoista. Jakaumataulu- koissa on esitetty muuttujan saamat arvot, vastaavat frekvenssit (n), frekvenssit prosentteina (%) ja validit prosentit (v. %), joissa on huomioitu puuttuvat arvot. Kaikki jakaumat ovat painotta- mattomia. Jos aineisto sisältää painomuuttujia ne löytyvät muuttujaluettelon lopusta. Joidenkin muuttujien osalta suorat jakaumat on korvattu kuvailevilla tunnusluvulla. Avokysymyksistä luokiteltuja vaihtoehtoja ei ole yleensä otettu mukaan koodikirjaan.

Jakaumat saattavat sisältää puuttuvia tietoja. Merkintä "tieto puuttuu (SYSMIS)" viittaa puut- tuvaan havaintoon. Merkintä "tieto puuttuu (User missing)" viittaa muuhun puuttuvaan tietoon, esimerkiksi arkistossa määriteltyn puuttuvaan tietoon (user missing). Useissa tapauksissa ai- neiston käyttäjän on harkittava myös muiden arvojen koodaamista puuttuvaksi tiedoksi (esim. 'en halua sanoa' tai 'en osaa sanoa').

Koodikirja voi sisältää myös erilaisia liitteitä. Tyypillisin liite on kyselylomake.

kademokratia; työpaikkakulttuuri; työvelvollisuus

Tieteenala / Aihealue

OKM:n tieteenalaluokitus: Yhteiskuntatieteet

CESSDAn luokitus: asuminen ja asunnot; kielet ja kielitiede; perhe-elämä, avioliitto ja sukupolvet; poliittinen käyttäytyminen, poliittiset asenteet ja mielipiteet; poliittiset ideologiat; talousjärjestelmät, taloudellinen kehitys ja kehitysyhteistyö; tasa-arvo, eriarvoisuus ja syrjäytyminen; tietotekniikka; työolot; työterveys; uskonto ja arvot

Sarjakuvaus

Tämä aineisto kuuluu sarjaan:

Yhteiskunnalliset erot nyky-Venäjällä

Yhteiskunnalliset erot nyky-Venäjällä -sarja tutkii venäläisten työikäisten ihmisten työelämää, hyvinvointia, yhteiskunnallisia asenteita ja toimintaa. Sarjan aineistot on kerätty vuosina 1990, 1998, 2006 ja 2015. Lisäksi sarjaan kuuluu kokoelma-aineisto. Monet kysymykset ovat pysyneet suurin piirtein samoina, joskin sarjan ensimmäiset aineistot eroavat jonkin verran myöhemmistä. Kohdejoukkona sarjassa on yli 18-vuotiaat venäläiset.

Sisällön kuvaus

Tutkimus on osa sarjaa, jossa kartoitettiin venäläisten sosioekonomista eriarvoisuutta ja työelämää. Aineistosarja, johon tämä tutkimus kuuluu, kattaa vuodet 1990, 1998, 2006 ja 2015, mikä mahdollistaa ajallisen muutoksen tutkimisen. Eriarvoisuus ymmärretään tutkimuksessa ammatin, sosiaalisen liikkuvuuden, omaisuuden ja tulojen kautta, mutta siihen liittyvät myös asenteet, politiikka ja uskonto. Tutkimuksessa haluttiin yhdistää ihmisten olosuhteet heidän arvoihinsa pyrkimyksenä tutkia näiden kahden välistä vuorovaikutusta.

Kyselyn alkupuoli käsitteli työelämää. Aluksi kysyttiin vastaajan perheen työ- ja koulutustasosta, vastaajan koulutuksesta, työhistoriasta sekä nykyisestä työstä. Vastaajaa pyydettiin lisäksi arvioimaan työautonomiaansa ja mahdollisuuksia osallistua päätöksentekoon työpaikalla.

Seuraavaksi kysyttiin perheestä ja perhetaustasta. Vastaajaa pyydettiin kertomaan muun muassa puolisonsa työstä. Lisäksi oltiin kiinnostuneita vastaajan vapaa-ajan ja median käytöstä, hyvinvoinnista, tulotasosta, kulutuksesta ja vauraudesta. Vastaajaa pyydettiin esimerkiksi valitsemaan listasta erilaisia vapaa-ajan aktiviteetteja sekä arvioimaan tulojen muutosta aikaisemmasta.

Tutkimuksessa tutkittiin myös vastaajien terveyttä ja kokemuksia terveyspalveluista. Heiltä kysyttiin muun muassa ovatko he saaneet tarvittavaa terveydenhuoltoa. Lisäksi tutkimuksessa oltiin kiinnostuneita internetin ja median käytöstä. Vastaajilta tiedusteltiin internetin käytön syitä ja määrää.

Lopuksi tutkittiin uskomuksia ja poliittisia mielipiteitä. Vastaajalta kysyttiin, osallistuuko hän poliittisten puolueiden tai muiden ryhmittymien toimintaan. Edelleen oltiin kiinnostuneita luot-

tamuksesta yhteiskunnallisiin instituutioihin, tyytyväisyydestä harjoitettuun politiikkaan, uskonnollisuudesta ja yhteiskunnallisista arvoista.

Taustamuuttujina ovat koulutus, työllisyshistoria, työpaikan toimiala, ammatti, ammattiasema, työantajasektori, työaika, siviilisääty, lasten lukumäärä, kotitalouden koko, tulot, kansallinen ryhmä, äidinkieli, uskontokunta, ikä, sukupuoli ja paikkakuntatyyppi.

1.3 Aineiston rakenne ja keruu

Maa: Venäjä

Kohdealue: Venäjä

Havaintoyksikkötyyppi: Henkilö

Perusjoukko/otos: yli 18-vuotiaat venäläiset, poislukien harvaanasutut alueet ja tiettyjen instituutioiden työntekijät (armeija, vankila, korkein hallinto ja sairaalat)

Aineistonkeruun ajankohta: maaliskuu 2015 – elokuu 2015

Kerääjät: Chernysh, Mikhail (Russian Academy of Sciences. Institute of Sociology)

Keruumenetelmä: Kasvokkainen haastattelu: paperikyselylomake (PAPI)

Keruuväline tai -ohje: Strukturoitu lomake

Aineiston ajallinen kattavuus: 2015

Tutkimuksen aikaulottuvuus: Pitkittäisaineisto: trendi/toistuva poikkileikkausaineisto

Muuttujien ja havaintojen lukumäärä: Aineistossa on 380 muuttujaa ja 5335 havaintoa.

Otantamenetelmä: Todennäköisyysotanta: suhteutettu ositettu otanta

Todennäköisyysotanta: yksinkertainen satunnaisotanta

Otoksen koko on noin 3000 vastaajaa. Otoksen kokoamisessa noudatettiin seuraavia periaatteita: Tutkimuksen muoto tulee pysyä samanlaisena ja otoksen muodostus yksinkertaisena, jotta se voitaisiin toistaa tulevaisuudessa helposti. Otoksen tulee olla myös hyvin dokumentoitu.

Tämä asetti seuraavia rajoituksia: Harvaanasutut alueet eivät ole osa otosta. Tiedyt instituutiot (armeija, vankila, korkein hallinto, sairaalat) eivät ole osa otosta. Tämä vähentää ja vääristää tutkimuksen miesvastaajia, sillä näiden instituutioiden työvoimasta huomattava osa (yli 80%) on miehiä.

Haastattelut organisoitiin rayoneiden kautta. Rayonit ovat hallinnollisia alueita, joiden koko vaihtelee 50 000 ja 300 000 asukkaan välillä. Rayoneita on Venäjällä n. 2800 kappaletta ja ne jaettiin: (1) suuriin kaupunkeihin, (2) kaupunkeihin ja kyliin sekä (3) urbaaneihin alueisiin. Otoksen muodostus perustuu Venäjän hallinnon (State Committee of Statistics) vuonna 1989 keräämään dataan. Vastaajat voitiin arpoa vaalialueiden avulla, joista löytyy tietoa yksittäisten ihmisten tarkkuudella. Suuret kaupungit (kuten Moskova ja Pietari) olivat otoksessa erillisinä. Suurissa kaupungeissa otos muodostettiin puhelinumeroihin perustuneella satunnaisotannalla. Katso lisätietoa koodikirjan liitteestä.

1.4 Aineiston käyttö

Aineiston käytössä huomioitavaa

Osa tutkijan tekemistä luokitteluista ja muuttujista on poistettu. Samoin muuttujat, jotka ovat tyhjiä tai epäselviä on jätetty pois lopullisesta aineistosta. Aineistosta on poistettu myös avoimuuttujat, joista löytyi koodattu versio. Aineistossa oleva muuttuja (q97_11) puuttuu kyselylomakkeesta. Aineistossa oleva muuttujapatteriston (q71_1-q71_13) selitteet eroavat kyselylomakkeen vastaavista. Lopuksi haastattelun alkamis- ja loppumisajat on poistettu.

Aineistosta on poistettu tunnisteellisuussyistä tarkka asuinpaikka sekä yhdistetty vanhimmat vastaajat yhteen luokkaan (q111, bv1). Harvinaiset uskonnot yhdistetty kategoriaan "Other" (q110).

Translated from Russian 2018

Hello, my name is **[Interviewer! Introduce yourself]**. The Institute of Sociology of the Russian Academy of Sciences is conducting a survey that set out to collect data on how the economic and political change influence that life of the Russians. We select families in accordance with a special method, so that several thousand interviews allow us to portray with utmost precision the life of our population. It means that we should question the selected members of your household older than 18.

All information, accumulated by the current study is anonymous. We undertake to never, under no circumstances to name publicly those who take part in our study. All data will be analyzed in general terms.

Your participation in the project is voluntary. However each refusal to participate has a negative effect on the degree of precision. Now our society needs precise information as never before. Therefore we want you or other member of your family to spend some time and give answers to our questions.

A Childhood

1. Talking about the past. In which settlement did you live most of your time before you turned 16? One answer only

- 1 In Moscow or St Petersburg
- 2 In another city with a population of 500 thousand or more
- 3 In a medium sized city (from population of 100 thousand to 499 thousand)
- 4 In a small city (population of less than 100 thousand)
- 5 Village or town
- 6 Other

2 Please, recall your childhood, the period of your life when you under 16. Who in that period played the role of a breadwinner in your family, who brought to the family the biggest part of its income? Name no more than two of such people.

- | | |
|-----------------|---|
| Father | 1 |
| Mother | 2 |
| Mother's father | 3 |

Mother's mother	4
Father's mother	5
Father's father	6
Father-in-law/stepfather	7
Mother-in-law/stepmother	8
Other relative	9
lived in education institution	10
[to question 8]	

3 Choose the first of these people. Let it be someone who brought the bigger part of income into your family. Who was that?

- *[Interviewer! choose the relevant figure from the list above and place it in the box]*

—

C Employment

14 What was your first permanent job? What was your occupation and position on your workplace?

Where you worked (e.g. a factory, school, depot, construction site __

Profession / position __

What was the content of work, what had to be done (main obligations) __

Did not work 9997 (question 19)

Can't tell 9999 (go to question 19)

15 How many years were you then?

__years

16 Where did you live then?

1 In Moscow or St Petersburg

2 In another city with a population of 500 thousand or more

3 In a medium sized city (from population of 100 thousand to 499 thousand)

4 In a small city (population of less than 100 thousand)

5 Village or town

6 Other

17 In what branch of industry did you work then?

Extraction industry , for instance coal mining or oil extraction	1
Processing industry, for instance machine building	2
Power production, for instance power station	3
Transportation for instance railway or air carrier	4
Communication, for instance post office, or telephone station	5
Construction	6
Agriculture, for instance a kolhoz or an agricultural cooperative	7
Forestry, for instance forest industrial enterprise	8
Finances, credit or insurance, for instance banking	9
Trade including wholesale or retail	10
Services, for instance laundry, repairs	11
Communal services, for instance Local service office	12
Education, for instance a school or an institute	13
Health care, for instance a clinic or a hospital	14
Science or scientific logistics, for instance a scientific institute	15
Culture or leisure provision, for instance a library or a movie house	16

Mass media, for instance a newspaper or a radio	17
IT communications and IT- industry	18
State or municipal offices	19
State on the regional level and state. What kind of public sector organization we are working on.	20
Public organization, for instance trade unions	21
Army	22
Law enforcement bodies (police)	23
Judicial system.	24
Other	25

18 How did you find your first job? You can select up to two

Read the company advertisement	1
Read about it in the paper	2
Through the Internet	3
Friends and relatives helped me	4
Through an employment agency	5
My school distributed me to it	6
My employer found me	7
Created the job myself	8
Randomly offered my services to possible employers	9
Other	88
Don't remember now	99

19 Are you employed at present?

- 1 Yes (question 21)
- 2 No (question 20) 2

20 Why are you not employed now?

Retired because of age, or work duration	[go to question 58]
Retired because of invalid status	[go to question 58]
Parental leave	[go to question 21]

Long leave without pay	[go to question 21]
Unemployed	[go to question 58]
Housewife	[go to question 58]
Student	[go to question 58]
Other reason	[go to question 58]

Interviewer! If the respondent is on parental leave describe the last workplace before leave

21 What is your way of employment? Do you work in an organization or are you self-employed?

- Work in an organization 1 (q 23)
- Self-employed 2 (q 22)

22 Why are you working independently / self-employed? You can select up to two answers.

- 1 Chance to be independent
- 2 A possibility to choose where and how to work
- 3 A possibility to use one's skills
- 4 A possibility to get a higher income
- 5 Absence of other employment
- 6 Prospects for business development
- 7 A possibility to work in the family
- 8 Other reasons (which? specify) _

23 What is your main occupation at present? Characterize in a most detailed form your specialty and work position.

Where you work (e.g. store, secondary school, plant) ___

Profession / position __

What is the content of your work, what needs to be done (main obligations) __

24 What is your branch of economy?

Extraction industry , for instance coal mining or oil extraction	1
Processing industry, for instance machine building	2
Power production, for instance power station	3
Transportation for instance railway or air carrier	4
Communication, for instance post office, or telephone station	5
Construction	6
Agriculture, for instance a kolhoz or an agricultural cooperative	7
Forestry, for instance forest industrial enterprise	8
Finances, credit or insurance, for instance banking	9
Trade including wholesale or retail	10
Services, for instance laundry, repairs	11
Communal services, for instance Local service office	12
Education, for instance a school or an institute	13
Health care, for instance a clinic or a hospital	14
Science or scientific logistics, for instance a scientific institute	15
Culture or leisure provision, for instance a library or a movie house	16
Mass media, for instance a newspaper or a radio	17
IT communications and IT- industry	18
State or municipal offices	19
State on the regional level and state. What kind of public sector organization we are working on.	20
Public organization, for instance trade unions	21
Army	22
Law enforcement bodies (police)	23
Judicial system.	24
Other	25

25 What are your relations with the employer? Are you permanently employed, work on contract or temporarily on oral agreement?

- 1 Permanently employed
- 2 Work on contract
- 3 Work on oral agreement
- 4 Work on a one-time contract
- 8 Not relevant
- 9 Hard to say

26 How did you get this job? Select no more than two answers

- | | |
|--|---|
| Responded to the enterprise announcement | 1 |
| Responded to a call in the paper | 2 |
| Via internet | 3 |
| Relatives or friends helped me | 4 |
| Via recruiting agency | 5 |
| Directed by the university or school | 6 |
| Employer found me | 7 |
| Created the job myself | 8 |
| Offered my services to enterprises | 9 |
| Other 88 | |
| Don't remember 99 | |

27 How many years have you been working at this work place?

__ years

Attention, interviewer! The questions 28-29 for respondents in organizations only, self-employed outside organization, to question 30.

28 Now questions on the organization that you work in as your main workplace. What is this organization? State, private or foreign enterprise?

- State-owned 1
- Private 2
- Foreign enterprise 3

Other 8

Hard to tell 9

29 How many people work there? If you're not certain, please give a rough estimate.

__ people

Hard to tell 000000

30 Did you change your job in the last 10 years?

1 yes

2 no

9 not relevant

31 Today many people are eager to find a second job to earn money. Do you have a second job?

Yes 1 (question 32)

No 2 (question 34)

32 From all of your additional work, select the most important to you. What is the work? Please tell your specialty and position for this job.

Interviewer! All sub-paragraphs should be given answers.

Where you work (a store, secondary school, a plant, etc) __

Profession / position __

What is the content of the work, what needs to be done (main job obligations) __

33 What is the branch of economy of your second job?

Extraction industry , for instance coal mining or oil extraction	1
Processing industry, for instance machine building	2
Power production, for instance power station	3
Transportation for instance railway or air carrier	4
Communication, for instance post office, or telephone station	5
Construction	6
Agriculture, for instance a kolhoz or an agricultural cooperative	7
Forestry, for instance forest industrial enterprise	8
Finances, credit or insurance, for instance banking	9

Trade including wholesale or retail	10

To a significant degree 3

Partly yes, partly no 2

To an insignificant degree 1

Hard to say 9

37 To what extent does your work require new ideas and non-standard solutions from you?

To a significant degree 3

Partly yes, partly no 2

To an insignificant degree 1

Hard to say 9

38 To what extent do you have the opportunity to plan your work?

To a significant degree 3

Partly yes, partly no 2

To an insignificant degree 1

Hard to say 9

39 To what extent does your work allow you to use your skills/qualifications and knowledge?

To a significant degree 3

Partly yes, partly no 2

To an insignificant degree 1

Hard to say 9

40 To what extent does your work correspond to the specialty that you received in educational institution?

To a significant degree 3

Partly yes, partly no 2

To an insignificant degree 1

Hard to say 9

41 At your workplace, how much do you think is the proportion of those who, working in the same position as you, will receive a promotion in the next five years?

Everyone 5
Most 4
About half 3
Minority 2
A few 1
No one 0
Hard to say 9

42 How many hours per week do you work at your main work place?

__ hours

43 In this work place, how often do you get physically tired?

Almost always 5
Often 4
Sometimes 3
Rarely 2
Never 1
Hard to say 9

44 In this work place, how often do you get mentally tired?

Almost always 5
Often 4
Sometimes 3
Rarely 2
Never 1
Hard to say 9

45 In this work place, how often do you have to accelerate your work pace?

Almost always 5
Often 4
Sometimes 3
Rarely 2
Never 1
Hard to say 9

E Participation in decision-making?

Interviewer! Only the respondents working in organizations respond in this section. If the respondent works independently, go to the question 58.

46 In this work place, who generally makes decisions on the following issues? You, your boss, you and your boss together?

item	You	My boss	Together	Hard to say
When to come to work	1	2	3	8
When to leave work	1	2	3	8
When to take a one day paid leave	1	2	3	8
Which tasks to accomplish	1	2	3	8
When to slow the pace of work	1	2	3	8
When to go on vacation	1	2	3	8

47. To which of the following categories do you belong?

- Manager of other managers 1 [go to question 48]
- Manager of ordinary workers 2 [go to question 48]
- Ordinary worker 3 [go to question 49]
- Not relevant 9 [go to question 49]

48. How many people work under your direct supervision? These are people whose task is to carry out your assignments.

__ people

49. Imagine a ladder of six steps. At the highest step is the director of the enterprise, at the lowest an ordinary worker. Which step are you on?

- 1 Director
- 2 Lower than director, but higher than department manager
- 3 Department or shop manager
- 4 Lower than department manager

5 Shop or floor manager

6 Ordinary worker

9 Hard to say

50. Does your official duty at the main place of work include managing subordinates or appointing other people for any type of work?

1 Yes

2 No

Interviewer! If the respondent in questions 47 and 49 answered "ordinary worker", and in the question 50 answered "no", go to question 52.

51. To what extent do you participate in the following issues regarding employees in your unit or the enterprise as a whole? Participate directly, take part in the discussion, do not participate? 1-3

3 Participate directly

2 Take part in the discussion

1 Do not participate

1 Hiring employees

2 Dismissing employees

3 Determining tasks to perform

4 Selecting materials

5 Determining the volume of work

6 Distributing the enterprise budget

7 Setting the pay level

8 Imposing sanctions

9 Buying equipment

10 Determining the variety of goods and services

11 Deciding to take credit

12 Deciding partners of the enterprise

13 Work results evaluation

52. Are the following tasks included in your primary job obligations?

Yes 1 No 2

1 Determining work tasks for employees, assigning them to any type of work

2 Selecting instruments or materials to be used by other workers

3 Determining the pace of work for others

4 Determining the duration of work for others

- 5 Determining the volume of work for others
- 6 Evaluation of quality of work accomplished

53. Can you influence the solution of the following questions?

Yes 1 No 2

- 1 Promoting and raising salary for other workers
- 2 Blocking salary raise for other worker
- 3 Dismissing other workers
- 4 Reprimanding other workers
- 5 Other types of incentives or punishments
- 6 Evaluation of work performed

54. How have the following characteristics of your workplace changed over the past five years? For the better, for the worse, remained the same?

- 1 Worsened
- 2 Unchanged
- 3 Improved
- 9 Less than 5 years in the workplace

- 1 Possibility to use your own skills, qualification, knowledge
- 2 Salary level
- 3 Relations between managers and workers
- 4 Social benefits
- 5 A possibility to get a raise
- 6 Technical provision

55. Is there a trade union at your enterprise?

Yes 1 (q 56)

No 2 (q 58)

56. Determine the degree of influence of the trade union on the solution of the following questions. Use a five-point scale on which "5" means "a lot of influence" and "1" means "no influence"

- 5 a lot of influence
- 1 no influence
- 9 hard to say

- 1 Hiring new employees
- 2 Dismissing employees
- 3 Fines, penalties, sanctions
- 4 Salary, guarantees and compensation
- 5 Workplace security
- 6 Working conditions
- 7 Getting benefits stipulated by the labor contract
- 8 Fulfilling worker dismissal guarantees
- 9 Working hours and leisure

57. Is the respondent currently a trade union member?

Yes 1

No 2

58. Have you been unemployed since 2008?

Yes 1

No 2

59. Has the the respondent been dismissed since 2008?

Yes 1

No 2

Interviewer! Next question asked only from who responded "yes" at one of the previous two questions. Others move to question 61.

60. How did you manage to survive in this situation? How did you provide yourself and your family financially?

1 Yes 2 No

1 Received compensation from employers since 2008?

2 Has the respondent been in petty trade since 2008?

3 Has the respondent received any benefits from federal or local authorities?

4 Has the respondent done any menial jobs since 2008?

5 Has the respondent sold any of his things since 2008?

6 Has the respondent lived on his savings since 2008?

7 Has the respondent got bank credit since 2008?

8 Has the respondent got any material support from relatives since 2008?

9 Has the respondent got any material assistance from their friends since 2008?

10 Has the respondent lived off his landplot or farmland since 2008?

11 Has the respondent got a new job immediately?

12 Other

F Family and leisure

61. What is your family status?

Single/not married	1 (q 63)
Married	2 (q 62)
Married, living separated	3 (q 63)
Lived in an unregistered marriage	4 (q 62)
Divorced	5 (q 63)
Widowed	6 (q 63)
Do not want to answer	8 (q 63)
Other	9 (q 63)

62. Where does your spouse work? Describe his/her main place of work.

Work place (for example a store, a secondary school, etc): __

Profession/position: __

Content of work __

63. Do you have children?

Yes 1

No 2

64. How many children?

One 1

Two 2

Three 3

Four 4

More than four 5

65. How many of them are underage?

One 1 (q 66)

Two 2 (q 66)
Three 3 (q 66)
Four 4 (q 66)
More than four 5 (q 66)
All are 9 (q 68)

66. How many of them are in school age?

One 1 (q 67)
Two 2(q 67)
Three 3(q 67)
Four 4(q 67)
More than four 5(q 67)
All are 9(q 68)

67. Who primarily takes care of them in the daytime?

Mother 1
Father 2
Grandmother or grandfather 3
Another relative 4
Nanny 5
They go to municipal kindergarten 6
They go to private kindergarten 7
Other 8

68. How many members of your family, including you, live under the same roof?
__ people

69. Which members of your family live with you under the same roof? You can choose multiple answers.

Spouse 1
Your children 2
Adopted children 3
Your parents 4
Spouse's parents 5
Your spouse's children from another marriage 6
Your siblings 7
Your spouse's siblings 8
Other relatives 88

Not relevant 99

70. Do you have to take care of elderly members of your family – your parents or the spouse’s parents?

Yes 1

No 2

71. How often do you spend time on the following pastimes?

item	Every day	Every week	Every month	monthly	A few times a year	Never	Hard to say
Going to a concert or theater	5	4	3	2	1	0	9

14. Other	5	3	2	1	8	9

73. If you work, how is your work paid at your main work place?

- Individual volume of work 1
- Collective volume of work 2
- Time on the job 3
- Fixed salary 4
- Depends on the profit of the enterprise 5
- Other 8
- Hard to say 9

74. What is your total monthly income, including all sources?

__ rubles

75. What is the total monthly income of your family, including all sources?

__ rubles

76. Which state benefits do you receive?

item	Yes	No
1.Unemployment benefits	1	2
2.Child benefit	1	2
3.Allowance for adopted children	1	2
4.Housing benefits	1	2
5.Allowance for the handicapped	1	2
6.Pensions	1	2
7.Medicine purchase benefit	1	2
8.Other	1	2

77. Have you received maternity capital in the last 5 years?

- 1 Yes
- 2 No
- 9 Not applicable

78. Which of the following social benefits do you get at your workplace now?

item	Yes	No	Hard to say	Not applicable
Faster access to housing	1	2	8	9
Kindergarten	1	2	8	9
Privileged access to rest homes or sanatoria	1	2	8	9
Privileged food pricing in a cafeteria	1	2	8	9
Work clothes	1	2	8	9
Coverage of travel to workplace and back	1	2	8	9
Privileged access to food products	1	2	8	9
Privileged access to consumer goods	1	2	8	9
Holiday payment	1	2	8	9
Sick leave payment	1	2	8	9
Medical insurance	1	2	8	9
Covering education costs	1	2	8	9

79. What are your living conditions?

- 1 Own house
- 2 Apartment in a block of flats
- 3 Rooms in a communal apartment
- 4 A room in a hostel
- 5 Rooms in a barack
- 8 Other

80. What is the total area of the house or apartment in which you live? Indicate in square metres.

__ square metres

81. I will read to you characteristics of several groups. Which one do you relate to?

- 1 We cannot make ends meet. We do not have enough money even for food.
- 2 We have enough money only for food, and even then at minimum. We find it hard to buy clothes.

3 We have enough money for food. We buy clothes, but the cheapest. Durables, such as TV or a refrigerator, are a problem for us.

4 We eat well. We have enough money for clothes, including expensive ones. If we save, we can buy durables. But there are really expensive things – a car, a dacha – that we cannot afford.

5 We easily buy things of durable use. Putting money aside, we can save up for an inexpensive car or a modest summer house. Our income is not enough to buy an apartment or a cottage.

6 We have no material problems. If we want, we can buy anything – real estate, expensive car, expensive tourist tour.

82. How has your financial situation changed since 2010?

Significantly improved 5

Has improved 4

Has not changed 3

Decreased 2

Significantly deteriorated 1

Not applicable 8

Hard to tell 9

83. Has your marital status changed since 2010?

Yes 1 (q 85)

No 2 (q 84)

84. How have the following expenses of your family changed this year, compared to 2010?

1 Decreased

2 No change

3 Increased

8 No such expense

9 Hard to say

85. What do you expect from the future? How do you assume your financial situation will change in the next three years?

1 Deteriorate significantly

2 Deteriorate slightly

- 3 Will not change
- 4 Improve slightly
- 5 Improve significantly
- 9 Hard to say

H Medicine and medical services

86. How do you and your family receive medical services?

Yes 1 No 2

- 1 We go to a local polyclinic or hospital
- 2 We use medical services provided by workplace
- 3 We go to private clinics and specialists
- 4 We get referral to the clinics of Moscow and other cities
- 5 We use services of healers and psychics
- 6 We go abroad for treatment
- 7 We independently search for medicines and methods of treatment on the internet
- 8 Other

87. Do you always receive fully the medical care that you need?

- 5 Yes, always (q 89)
- 4 Yes, in most cases (q 88)
- 3 In half cases and in half, no (q 88)
- 2 Not in most cases(q 88)
- 1 Never(q 88)
- 9 No need for medical care (q 89)

88. How often the following reasons make it difficult for you to get medical care?

- 5 Always
- 4 Often
- 3 Sometimes
- 2 Rarely
- 1 Never
- 9 Hard to say

I Information and media

89. Do you use the internet?

- 1 Yes
- 2 No

90. Where do you usually get access to internet? Here you can select several answers.

- 1 At home
- 2 At work
- 3 Out of work or home: café, library, educational institution
- 4 At relatives' or friends' place
- 9 Other

91. How often do you use the internet for the following purposes?

- 5 Every day
 - 4 3-5 times a week
 - 3 1-2 times a week
 - 2 1-2 times a month
 - 1 Less frequently
 - 9 Never
-
- 1 Payment of communal and other payments
 - 2 Buying food products
 - 3 Communication with authority
 - 4 Entertainment and games
 - 5 Reading newspapers and magazines
 - 6 Reading news sites
 - 7 Receiving and sending email
 - 8 Communicating by Skype, video calls to relatives and friends
 - 9 Spending time on Facebook network
 - 10 Spending time on Vkontakte network

- 11 Spending time on Twitter
12. Spending time on Livejournal

92. Which of the following did you have to do in the last seven days?

Yes 1 No 2

1. Read newspaper that wasn't distributed for free
2. Read a journal
3. Listened to the radio
4. Watched TV

J Society and politics

93. In which of the following events did you take part in 2013-2014?

1 Yes 2 No

1. Signed a petition
2. Participated in public organization congresses or conferences
3. Participated in a strike
4. Participated in a demonstration or protest march
5. Participated in festive events and festivities on the Victory day
6. Participated in a rally
7. Wrote a letter to a newspaper
8. Participated in the election team of one of the candidates
9. Voted in local elections

94. Which organisations do you participate in?

- 1 Yes, taking part fully
- 2 A member, but do not participate
- 3 Not a member and do not participate

1. Charity organizations
2. Religious organizations, church parishes
3. Cultural and art organizations and groups

4. Trade unions
5. Political parties
6. Minority protection organizations
7. Environmental organizations
8. Veteran organizations
9. Organizations for the protection of the rights of people with disabilities
10. Youth organizations (clubs)
11. Women's organizations
12. Sports clubs and unions
13. Consumer organizations
14. Formal or informal gatherings or tenants or courtyard meetings
15. Interest groups (fishermen, hunters etc.)
16. Volunteer organizations
17. National movements and organizations
18. Other clubs or organizations

95. To what extent do you trust the following authorities, public organizations or groups?

	Fully trust	Mainly trust	Partially trust	Mainly distrust	Completely distrust	Hard to say
1. Council of the Federation	5	4	3	2	1	9
2. State Duma	5	4	3	2	1	9
3. President of Russia	5	4	3	2	1	9
4. Government of Russia	5	4	3	2	1	9
5. Regional administration	5	4	3	2	1	9

7.Ability to take risks	5	4	3	2	1	9
8.Ambition, ability to set high goals	5	4	3	2	1	9
9.Inborn intellect	5	4	3	2	1	9
10.Living in a capital	5	4	3	2	1	9
11.Connections abroad	5	4	3	2	1	9
12.Charm, communicative skills	5	4	3	2	1	9
13.Correct political views	5	4	3	2	1	9
14.Right ethnic background	5	4	3	2	1	9
15.Honesty	5	4	3	2	1	9
16.Law abidance	5	4	3	2	1	9
17.Independence	5	4	3	2	1	9
18.Luck	5	4	3	2	1	9

102. In your opinion, which of the following are threats to your country?

item	A serious threat	Not a threat				Hard to say
1.Differences between rich and poor	5	4	3	2	1	9
2. Differences between young people and the older generation	5	4	3	2	1	9
3.Differences between oligarchs and ordinary workers	5	4	3	2	1	9
4.Differences between prosperous and disadvantageded families	5	4	3	2	1	9

5.Differences between men and women	5	4	3	2	1	9
6.National differences	5	4	3	2	1	9
7.Religious differences	5	4	3	2	1	9
8.Differences between urban and rural life	5	4	3	2	1	9
9.Differences between people with various political views	5	4	3	2	1	9
10.Differences between patriots and westernizers	5	4	3	2	1	9
11.Differences between Muscovites and provincial residents	5	4	3	2	1	9

103. In your opinion, do you have enough will to drastically change your life if needed?

- No, I feel that I could not radically change my life 1
- Most likely I could not 2
- In some situations yes, in some situations no 3
- Most likely I could 4
- I'm certain that I could 5
- Hard to say 6

104. How would you like to see Russia in the future?

- A socialist country like the USSR 1
- A country with developed social services are developed, with free medicine and education, like Finland or Germany 2
- A country with economic freedom and a developed democracy, such as the UK 3
- Rapidly developing country, where society is under strict control, such as China 4
- Hard to say 6

L Data on the respondent

105. Which nationality do you belong to?

- Russian 1
- Tatar 2
- Ukrainian 3
- Bashkir 4
- Chuvash 5
- Chechen 6
- Armenian 7
- Other 8
- Hard to say 9

106. Which language do you consider to be your native language? This refers to the language in which you are talking with your parents' family.

- Russian 1 (q 108)
- Tatar 2 (q 107)
- Ukrainian 3 (q 107)
- Bashkir 4 (q 107)
- Chuvashia 5 (q 107)
- Chechen 6 (q 107)
- Armenian 7 (q 107)
- Other 8 (q 107)
- Hard to say 9 (q 107)

107. If Russian language is not your native language, how would you rate your Russian skills?

- I speak and write well 1
- I speak well but don't write well 2
- I speak a little 3
- I only read 4
- No command 5
- Hard to say 6

108. To what extent do you speak English?

- I speak and write well 1
- I speak well but don't write well 2
- I speak a little 3
- I only read 4
- No command 5
- Hard to say 6

109. Are you a believer?

- Yes 1 (q 110)
- No 2 (q 111)

110. Which religion do you belong to?

- Orthodoxy 1
- Islam 2
- Protestantism 3
- Catholicism 4
- Baptism 5
- Judaism 6
- Buddhism 7
- Krishna 8
- Other 9
- Neither one religion 10

1 Project Description

1.1 The main objectives of the project

The sample described below has been used to collect data for the study “Social distinctions in modern Russia”(SDMR). The study was implemented in concert and with assistance from Finnish colleagues, representing the University of Tampere (Raimo Blom, Harri Melin and Jouko Nikula) and the Aleksanteri institute of Helsinki (Markku Kivinen). The project set out to span a wide range of various issues characterizing social differentiation in contemporary Russian society. In the context of the project the social difference was treated in a broad sense as a variety of human conditions (occupation, social mobility, property, income) as well as distinctions of attitudes towards civic life, politics, religion and other relevant issues. The logic of combining human condition variables and value questions aimed to explore the interaction between the two realms thereby testing numerous hypotheses related to their mutual influence. Another set of fairly innovative ideas covering various issues of social change might come from a possibility of a comparison between the results of contemporary data and the 1991 study “Social structure and class consciousness” (Coordinators E. Wright, M.Hout) of which Russia was a participant.

The set of issues accentuated in the project was the main rationale for the choice of sample design. The sample was to target the Russian population as a whole. It made little room for a detailed elaboration of territorial or ethnic issues that might require disproportionate or detailed representation

1.2 General principles of sample design

It is assumed that as any effective sample for any population the sample of the Russian Federation must be based on the following major principles:

1. The sample must allow for a reasonable equilibrium between the costs of the study and the precision of the data. It is obvious that in each case the equilibrium will be hitched to its own level of precision and costs. However, the possibility to control precision might make it possible to choose the optimal research strategy with concomitant conclusions about the exact sample size needed. The latter allows to limit the costs of the study and generate the highest possible precision of the data. In theory the bigger the sample, the more it precision it is capable to render. In practice each step towards more precision requires more investment and at some point drives the budget of the study in excess of the sum allocated for data collection. For example, while the sample of 10000 is certainly more preferable than the sample of 3000 thousand, the reduction of the sample error by 2.5% will in many cases not be contemplated as a reasonable balance for the tripling of field costs.
2. The sample design should be clear enough to allow for an easy replication in the future. While the design should be the same, the respondents should be different. In other words, the sample should not require consecutive visits to the same households unless it is elaborated for a panel study.
3. The sample must be well documented and open to the inspection of international experts. To ascertain the results of the study, the latter should be able to place reasonable requests for quality control procedures in the form of small-scale reliability studies based on a replica sample design for the main survey.

1.3 Sample constraints

The above-mentioned principles place a number of constraints on the actual sample design. Firstly, the sample must not invade any of remote areas or areas difficult to accede. In other words, it would be highly impractical and too costly to include into the sample the sparsely

populated areas in the Far North of Russia. Their inclusion into the sample would make little or no impact on the final study results (in the sample of 3000 they would be represented by no more than fifteen respondents), but in the same breath inflate the study's budget beyond reasonable costs.

The sample design should not require entry into dangerous or war-stricken areas. At present or in the near future it would hardly be feasible to incorporate areas in the Chechen, Ingush, Dagestan or Ossetian republics into any reasonable sample design. If a situation of civil unrest arises in another area, the sample design should be subject for quick change crossing it out from sample lists. In other words, given the cost, time and personnel safety requirements, the sample should take into account any dangerous developments in the subjects of the Russian Federation.

Table 1. Population in non-accessible areas excluded from the sample.¹

Region	Population (in thousand)	Density (person per square meter)	Proportion of the population of the Russian Federation
Kaliningrad oblast	1072,0	428,0	0,72%
Chechen republic	813,0	66,8	0,55%
Ingush republic	309,0	59,1	0,21%
Adigei republic	450,0	49,6	0,30%
Dagestan	2074,0	59,1	1,39%
Northern Ossetia Republic (Alania)	665,0	83,0	0,45%
Kabarda-Balkar republic	790,0	32,3	0,53%
Sakhalin	713,1	8,1	0,48%
Taimir autonomous region	54,5	0,63	0,04%
Evenksky autonomous region	28,4	0,037	0,02%
The Kamchatka region	469,8	1,1	0,32%
Chukotsky autonomous region	155,7	0,21	0,10%
Yamalo-Nenetski autonomous region	495,0	0,66	0,33%
Khanti-Mansi autonomous region	358,7	1,24	0,24%
Tuva autonomous region	313,5	1,84	0,21%
Total	8761,7		5,88%

The sample must not require the selection of respondents in areas forbidden for visits of outsiders with no comfortable conditions for interviewing. Such are prisons, military units or hospitals. This rule poses problems because all of the named institutions comprise a significant part of the population in the working age, particularly males. The exclusion of this part of the population from the sample will inevitably be conducive to a reduction of the proportion of males in the sample.

Table 2. Population in institutions

¹ Demographicheski Ezhegodnik (The Demographic Yearbook of Russia), Moscow, Goskomstat of Russia, 1997, p.25-32

Institutions	Population thousand)	(in Proportion of the total population (%))
Russian armed forces	1300	0,8%
Forces of the Ministry of the Interior	250	0,2%
Inmates of prisons and correction camps	1000	0,7%
Inmates of hospitals and clinics	1788	1,21%
Total	4338	2,91%

According to the Red Star² newspaper men constitute close to 95% of the Russian army servicemen and Ministry of the Interior troops. Men make up 88% of all inmates of Russian prisons, correction camps and detention centers³. In hospitals the proportion is closer to that of the population. The above-mentioned facts will be taken into account in the process of comparing survey data and parameters of the population.

2 First Stage of Selection

2.1 Choice of PSUs

The design of the sample was based on the assumption that the overall sample size will be tantamount to about 1600 households or about 3000 respondents. The first stage of a multistage cluster sample develops the first level of classification of observation units in the population. The logic for the choice of a primary selection unit (PSU) is based on several vital conditions. Firstly, the PSUs must be as heterogeneous as possible. This condition implies that they must not be either too big or too small. Big units such as *oblasts* do not abide by the condition of homogeneity and therefore are unfit for this stage of selection. Electoral districts, on the other hand, are too small and while conforming to the first condition, they cannot be used as a fundamental unit of the selection process because any choice based on them would make the sample prohibitively expensive.

Secondly, the PSUs must be defined by clearcut geographical boundaries and described by primary statistical data. Access to the data must not be a problem as is usually the case with census units, well-described and relatively heterogeneous, but at the same time qualified as classified information by the State Committee for Statistics.

Thirdly, the number of PSUs should be over a thousand to contribute to the reduction of the sample error at the primary stage of the selection. It is obvious that the more PSUs are there for the first stage of selection, the more variance of the population parameters they will embrace.

Fourthly, the territory covered by each PSU should be reasonably limited to ensure access to any of its points by a team of interviewers. It is obvious that an *oblast* is too large to be covered by a small interviewer team. A proper selection of secondary sampling units in an *oblast* might

² Red Star, February 28, 1997

³ *Rossia v tsifrahk*. Goskomstat Rossii. 1998. p. 120

thus be conducive to a heavy travel load for the usual team of two interviewers and therefore could complicate the process of data selection beyond reason.

The above arguments speak in favor of an administrative district (*rayon*) as the optimal choice for a PSU in the sample design of the Russian Federation. Firstly, *rayons* are comparatively small: their population might range from 50 to 300 thousand. However, it can be observed that smaller *rayons* are usually found in rural areas and bigger ones – in urban centers. Therefore, a process of stratification into rural and urban *rayons* can eliminate a large part of the size-related variability of the PSUs. Secondly, *rayons* are fairly well described in statistical and other literature and the data on *rayons* are not classified. Thirdly, the number of *rayons* in the Russian Federation is close to 2800 and that is a good basis for selection.

2.2 Source of primary data

The given sample design is based on the data of the 1989 All-Russia Census conducted by the State Committee of Statistics and the MicroCensus of 1994. According to the data the territory of Russia was divided into 2788 *rayons*. The available statistical database has several limitations.

- It is evident that a lot of change has occurred in some parts of the Russian Federation since 1989. The change has made its most tangible impact upon the population of capital cities. To counter a possible bias, the latest update of the data (1996) by the State Committee of Statistics is used. The updated version of the data base is founded in the interim 1994 Microcensus conducted by the Committee.
- The data provide no evidence of the population of prisons, hospitals or army units situated on the territory of *rayons*.
- The data do not allow for a detailed examination of smaller settlements inside the *rayons*. In-depth information on territorial subdivisions, towns and villages had to be gotten by additional desktop research or through the offices of local research centers that sometimes had to undertake on-site inspection to generate up-to-date information on the local settlement structure.

Owing to the probability logic behind the design, the mentioned change would have to be quite dramatic to introduce any bias into the survey. It has to be borne in mind that whatever limitations of the data, they are the only reliable base for sample formation and will remain so beyond the year 2000 when the results of the next Census might be forthcoming.

The existing pattern of population distribution allows to divide all *rayons* into three types:

- Big city *rayons*, exemplified by Nizhni Novgorod
- *rayons* constituting territories with various settlement on them (towns and villages).

- urban *rayons* taken out of relevant territories subordinate to the larger administrative unit (oblast).

The last category poses a greater problem than the first two. In the given sample design the original statistical data were kept intact. The smaller urban settlements subordinate to the oblast were represented as pseudo-*rayons* on a par with regular *rayons*. The conversion was facilitated by the fact that the units in question are of the same average size as regular *rayons*. The smaller urban type units situated in the vicinity of big cities (*PGT*) were clustered to produce a single pseudo-*rayon* comparable in size to smaller *rayons*. This solution can be regarded as optimal from several viewpoints. First. The *rayons* form fairly homogeneous strata favored by sampling theory. Second. The chosen way of grouping does not violate the original typology of data proposed by the Russian State Committee of Statistics. Thirdly, the solution makes it possible to drive the survey expenses down by collapsing the number of clusters. The overall number of *rayons* thus manipulated is tantamount to 456.

2.3 Self-representing units

The sampling theory demands that self-representing units (SRU) should be chosen in line with two main principles:

1. The size of the unit. In almost every country there is one or several urban centers that are much greater than others. In Russia there are two such centers - Moscow and St. Petersburg. According to the State Committee of Statistics the population of Moscow is now close to 9 million, and the population of St.Petersburg -5 million.
2. The distinct social and cultural environment of the center offering more potential for research. Both Moscow and St. Petersburg are capital cities with an array of life styles distinct from the rest of the Russian Federation. Moscow is particularly specific and different from other Russian cities because it is traditionally a privileged city with a seat for many government offices and private companies. Currently over 90% of all Russian private enterprises are based in Moscow. It is a well-known fact that Moscow has gone a lot farther towards capitalism and private enterprise than any other Russian city.

When the number of strata is equal to 60-70, the sample provides for 5-6 of them as self-representing units. The SRUs cover about 20-25% of the population. When the number of strata is smaller, so is the number of SRUs. In the given sample design two SRUs are singled out.

Table 1. Characteristics of SRUs

SRU	Socio-economic zone	Population (in thousands)	Number of <i>rayons</i>
Moscow	Central	8995	35
St.Petersburg	North-Western	5035	22
Total		14030	57

The SRUs are not regarded as separate strata and therefore are not divided into *rayons*. Data collected in a SRU are representative. They can be taken out and analyzed separately. A survey in a SRU usually follows the pattern of any survey based on a representative sample. In Moscow, for instance, the sample was generated by a random choice of household telephone numbers. Since 95% of all Moscow households have access to telephone, it was possible to conduct a random selection using personal telephone number database. It may be said that the selection process in Moscow came as close to the pattern of simple random sampling as was possible.

Stratification

The theory of survey sampling assumes that a certain amount of information is known about primary sampling units. In the United States a sampler can make productive use of ample data on the geographical location of a PSU, its type (inner city, suburban or rural area), its population at the previous census, its rate of population change, the proportion of the population employed in manufacturing, the proportion of non-white population resident in the area. As was said before, the Russian statistical bureaus do not provide as much information. The data on the PSUs are limited to the description of its geographical boundaries, its type and its population size.

Nevertheless, even the available data suffice to launch the process of stratification. The latter implies the division of the population into subpopulations, or strata, based on the supplementary statistical data and creating separate samples from each of the chosen areas. Stratification is essential in Russia that abounds in sparsely populated areas. Under the existing circumstances stratification allows to control the size of the sample and at the same time ensure the *epsem* (equal probability of selection) principle for each individual in the population. In the present design we propose to make the strata sample size proportional to the population sample size. In other words, we apply the *uniform sampling fraction* principle

As is proven by the sampling theory stratification makes a sample no less precise than a simple random sample of the same population.⁴ The number of the strata is usually determined on the basis of several major criteria. First. The division of the sample into strata should end up with approximately 20 interviews per interviewer and in the conditions when two interviewers are employed - with 40 interviews per strata. The engagement of two interviewers is paramount since a good deal of travel is involved. Besides the conduct of interviews by two employees will allow to utilize sophisticated quality control measuring when the measure of interviewer variance might serve as an indication of possible error generated by the process of data collection. A larger than 20 number of interviews may cause an overload for each interviewer and consequently be detrimental to the quality of the data thus obtained. On the other hand, a

⁴ Kalton Graham. Introduction to survey sampling. A Sage University paper.1983. p.20.

smaller number of interviews per interviewer is likely to dwarf his or her income and leave the most qualified field staff dissatisfied with the conditions of their involvement in the project⁵. Fortunately, there was a chance to bypass this problem in the present study by way of forming not one but several locally-based teams of interviewers in every region.

Second, each stratum should form a relatively homogenous unit with little variance over demographic or cultural characteristics.⁶ Since we do not have any detailed information on the units, we follow up the following principles of aggregating PSUs into a stratum:

- The PSUs should be approximately similar in size. The size of PSUs is provided by the available statistics from the data of the last Census.
- The PSUs must be of the same type. We divide PSUs into urban (more than 66% of the population is urban), mixed (from 33% to 66% is urban) and rural (less than 33% of the population is urban).
- The PSUs must be situated in geographical proximity to each other. Grouping rayons from the same or adjacent socio-economic zone ensures this criterion.⁷ In the majority cases the *rayons* are drawn from the neighboring regions (*oblasts*). The available data indicate that this degree of proximity is highly likely to ensure similar cultural characteristics of the PSUs. The characteristics in question comprise such important indicators as family size, life style and consumption patterns.

Third. The number of strata should not exceed 50 units. Any other option might require too large a workforce and boost expenses. While there is always a possibility to employ additional staff, the number of qualified interviews cannot be quickly increased: “The interviewer skills constitute an expensive and important asset. This places a premium on the continued

⁵ The number of interviews conducted by one interviewer within one survey should be limited. In a number of methodological experiments it has been revealed that an interviewer if faced with more than forty interviews develops undergoes a process of “education”, He often feels that he is increasingly qualified to interpret the arguments he gets from the respondents. He or she develops an attitude described in the methodology of social research as “selective listening”. (Elizabeth Noelle. *Umfragen in der massengesellschaft*. Munchen. 1971.) In other words, as a result of an overload the interviewer is less and less inclined to reduce himself to recording the answers from the respondent and and is more and more likely to provide his own interpretations to the responses he gets. The problem can be avoided if the interviewer’s load is limited, ranging from 20 to 30 interviews in one survey.

⁶ In *Survey Sampling* by L.Kish the problem is formulated in the following fashion: “The aim is to form strata within which the sampling units are relatively homogeneous in survey variables. Their variances are reduced to the extent that the variation among sampling units within the strata is less than their variation in the entire population. Hence, we strive to increase and maximize the homogeneity of the sampling units within strata. For a given population of sampling units, this is equivalent to increasing the differences, or heterogeneity among the means of the strata.” (L.Kish. *Survey sampling*. John Wiley and Sons, New York, 1965, p. 100).

⁷ According to the Russian Statistical Agency, the territory of the Russian Federation is divided into 11 socio-economic zones: Northern, North-Western, Central, Central Black-Earth, Volgo-Vyatsky (Northern Volga basin), Povolzhski (Volga river basin), Northern Caucasian, Ural, West Siberian, East Siberian, Far Eastern

employment of the interviewers for several years at least. After the initial training, most of the further training and instructions for specific surveys are handled with mailed materials.”⁸

We assumed that the present sample design would require no more than 24 strata - an arrangement fitting in with all above conditions. The average size of a stratum might range from 3 to 6 million inhabitants. The rural strata may be smaller as a result of a response to large-scale depopulation of many rural areas.

2.4 Standard error

One important aspect of our study is to provide information on the precision of the estimates made from the survey data. Since the design does not require the questioning of all possible respondents in Russia, but only a selection of them, we can expect to obtain somewhat different results of randomizing procedures produced a different sample each time. What should be estimated, therefore, is the degree to which the results that are obtained are subject to this variability, called sampling error. The sample design proposed is a complex one involving the selection of clusters of households by the three-stage sampling procedure which will be described lower. This factor has the effect of increasing sampling error beyond that expected from a simple random sample of the same number of elements. For samples of this kind special procedures are needed in order to estimate sampling error. These procedures differ from the application of simple formulas such as pq/n (p and q are the distribution in the sample, n is the number of respondents) that assume simple random sample. The method adopted here is based on the Taylor series approximation to the variance of a ratio mean. It uses the differences in sample results found between pairs of primary sampling units selected within each of the many strata.⁹ The computations are usually carried out using the WestVar software created by SPSS corporation.

$$(1) \quad D_h = (Y_{h1} - Y_{h2}) - r(x_{h1} - x_{h2})$$

where r is the ratio y/x being estimated based on all respondents in the sample. For the means and proportions estimated for this study, x is simply the number of cases in the sample, and y is the value of the variable whose mean is being estimated (for proportions, the value of y is either 1 or 0). Subscripted values of x and y refer to the values within a specific primary sampling unit (1 or 2) within stratum h . Note from equation 1 that we are interested in the differences between the values of the x 's and respectively y 's within stratum h . Once the value of D_h has been computed for each stratum, it is squared, summed across strata, and the sum is divided by the square of the sample size, yielding the estimated variance of the ratio r .

$$(2) \quad \text{var}(r) = 1/x^2 \sum D_h^2$$

The standard error is the square root of the variance computed from equation 2.

⁸ Kish L. Survey sampling. John Wiley and Sons. Inc. New York. 1965. p. 366.

⁹ Computation of variances of this paired selection method is described in Kish, Survey Sampling, pp. 190-195; see equation 6.4.8. This method has been widely used, discussed, and recommended.

Using these procedures and the computer program we can generate in a mechanical way, an estimated standard error for each of the percentages reported in the tables of study results.

The above variance is multiplied by standard deviations of the sampling distributions known as the standard error. Let us denote the standard deviation of a simple random sample as y_0 (with the subscript 0 to indicate simple random sampling), its standard error by SE (y_0) and the square of the standard error, the variance of y_0 by $V(y_0)$. Most standard sampling error can be presented in terms of variances rather than standard errors. The variance of a sample mean in a simple random sample of size n is embodied in

$$(3) V(y_0) = \frac{N-n}{N-1} \cdot \frac{\delta^2}{n}$$

or converted from the previous formula

$$(4) V(y_0) = \frac{N-n}{N} \cdot \frac{S^2}{n} = (1-f) \frac{S^2}{n}$$

where n/N is the sampling fraction (f)

According to the formulae above the $V(y_0)$ is dependent on three major factors:

1. *The finite population correction (fpc)* shown in the formula $(N-n)/(N-1)$. Obviously it is negligible in the case when the population is large. For the sample of the Russian population it will be tantamount to $(148000000-3200)/(148000000-1) = .999$. In other words fpc testifies to the paradoxical fact that the larger the population the less important is the size of the fraction that the sample is equal to.
2. *The sample size.* As can be seen from the formula the larger the sample, the smaller is $V(y_0)$. In other words, for larger populations, such as the population of Russia or, for that matter, the population of a big city, the size is much more important in determining the precision of survey results. The sample of 3200 drawn from the population of a country renders the same results as the sample drawn from the population of a big city.
3. *The variance (S^2).* If all elements of the population choose to respond in the same fashion, the standard error will be negligible. If, on the other hand, they differ, there is a probability that the population mean will greatly differ from the sample mean. Hence to determine the standard error the mean of the sample should be compared with the mean of the population. The advantage of equation 4 is that S^2 has an unbiased estimator in the form of $s^2 = \sum (y_i - y_0)/(n-1)$. Therefrom comes

$$(5) se(y_0) = (1-f) \sqrt{s^2/n}$$

with lower case letters indicating sample estimators.

When the standard errors is estimated, a confidence interval should be established. If the sample is large, the 95% interval for Y is $y_0 \pm 1.96 \text{ se}(y_0)$. The 1.96 is taken from a table of the normal distribution, where 95% of the normal distribution falls within 1.96 standard deviations around the distributions means. So the final formula for estimating the sample error would consist of the estimation of the effect of clustering and the evaluation of standard error as such.

$$(6) \text{ se}_s = 1.96 \sqrt{\text{var}(r)/n + (1-f)s^2/n}$$

It is evident that we have no means to estimate $\text{var}(r)$ prior to the survey itself. We can, however, estimate the maximum standard error (50/50 distribution) for the three proposed samples (2600 without an account for the design effect. In this case the sample error might be equal to 1,92.

As our experience shows the design effect raises the sample error 2.1-2.2 times in the samples comprising from 2000 to 3000 respondents. In other words, the sample size of 2600 will yield the sample error of approximately 5%.

2.5 Rayon selection¹⁰

Once the list of primary areas in each stratum is complete, one is selected from each stratum. The selection was carried out using the procedure described L.Kish.¹¹ Prior to selection, the *rayons* were grouped according to their size and for mixed stratum – also according to the proportion of the urban population. Each rayon received a number and after that a random selection of one single PSU was taken.

3 Second Stage of Selection

3.1 Choosing the secondary sampling units

The second stage consists in the selection of secondary selection units (SSUs). The sample frame provides several options for a SSU in various areas. As the PSUs the SSUs must be of an approximately equal size. Census districts can be used as the SSUs, however as has been mentioned above, the information about them is scarce. The second strategy of selection can be based on electoral districts. They are small enough and can be served by one or two interviewers. In addition there are variegated data about them including a list of housing blocs and lists of residents. The latter are, however, quite frequently out-dated or unavailable. We assume that an original strategy of selection should be employed in each PSUs depending on access to primary data about SSUs. In some census districts might be used, in others - electoral districts or postal areas.

Let us analyze the procedure of selecting a SSU and within a PSU. In an imagined PSU there 3 towns, 4 urban type settlements and 12 villages. We choose two SSUs in the given PSU.

¹⁰ With SRUs left out the base for strata formation incorporates **2492** *rayons* and pseudo-*rayons*.

¹¹ L.Kish. Survey Sampling, New York. John Wiley and Sons. p. 230-231

Table 5. Process of SSU selection

Selection of SSUs. (ED - electoral district)Settlement	SSU	Population (thousands)	Stratum population (thousands)	Cumulative population
Town 1	ED-1	2,2	9,0	2,2
Town 1	ED-2	2,2		4,4
Town 1	ED-3	2,1		6,5
Town 1	ED-4	1,3		7,8
Town 1	ED-5	1,2		9,0
Town 2	ED-1	2,0	6,7	11,0
Town 2	ED-2	1,8		12,8
Town 2	ED-3	1,5		14,3
Town 2	ED-4	1,4		15,7
Town 3	ED-1	1,8	3,5	17,5
Town 3	ED-2	1,7		19,2
Village 1		1,7	4,2	20,9
Village 2		0,8		21,7
Village 3		0,8		22,5
Village 4		0,5		23,0
Village 5		0,4		23,4
Village 6		0,1		23,5

In line with the PPS principle electoral districts are grouped into strata according to the type of settlement and size. These are not the only possible grouping criteria. In *rayons* with mixed ethnic composition ethnicity may also be brought in and, correspondingly, each ED is categorized as having either ethnically homogeneous or heterogeneous population.

To systematically select the SSUs we need to know the interval to abide in the process of selection. The interval is equal to $n/2$ where n is the total population of the PSU. In our case the interval is equal to 11,75

The process of selection consists in adding 11,75 to the number between 0 and 10 generated by the random number generator. Let the number be equal to 5. So the first SSU selected is closer to five on a cumulative scale in the right-hand column. This is Town 1-ED2. The second SSU chosen is the one pinpointed through the following calculation.

$$(7) \text{ Second SSU} = 5 + 11,75 = 16,75$$

The closest SSU to this point on a cumulative population scale is Town 3-ED1. It is then selected as the second SSU to be visited by interviewers.

3.2 Number of interviewers in a SSU

Our next step will consist in determining the number of interviews for each ED selected. It is paramount that each households chosen should be characterized by the same probability of being selected as all other households of the area. The probability results from the probability of selection determined for the *rayon* (p_1), the probability of selection for the ED (p_2) and the probability of selection of a given ED resident (p_3).

P1 is a ratio of the given *rayon* population and the population of a given stratum. P2 is a ratio of the N population of a given ED to the population of the *rayon* multiplied by 2. P3 is equal to the number of interviews held in a given ED divided by its population. At the same time it is the ratio of the sample size (number of households) to the Population of Russia (total number of households in Russia) divided by the P1*P2. In other words, the number of households in a *rayon* will be computed on the basis of the following formula:

$$(8) N = P_{ed} * p/p_1 * p_2$$

where N is the number of interviews, P_{ed} is the population of a given ED, P is the probability of selection for each household of the Russian Federation, P_1 is probability of selection of a given stratum and P_2 is the probability of selection of a given *rayon*. Let us imagine that the population of the stratum is equal to 4 mln or 1,1 million households.

Table 6. The number of households in each ED.

Settlement	SSU	Population	p1	p2	N
Town 1	ED-1	2200	0,042	0,00588	18
Town 3	ED-3	1800	0,042	0,00588	18

On the average the number of households per electoral district is equal to 18. It implies holding about 100 interviewers with individual respondents.

4 Third Stage of Selection: Choosing Respondents

There are several ways for choosing respondents. For many years Russian pollsters relied on electoral lists as a source of names and addresses. They are conveniently organized and in case of need make it possible to effect systematic selection of a preset number of respondents. However recent changes in the electoral system allowing citizens to abstain from voting decreased the quality of the lists. It is no longer obligatory for electoral committees to doggedly pursue every respondent if he or she chooses to skip their civic duties. In addition in many cases a more mobile population, especially in big cities, has attenuated a link between the formally registered and real place of residence. Quite frequently squeezed for more income urban dwellers lease their apartments to strangers who are not to be found in the relevant electoral lists. One more fault of the lists is that they contain only citizens of over eighteen.

The present design provides a more reliable alternative to the electoral lists. While data contained in the electoral lists is increasingly unavailable (frequently classified) data on the housing blocs situated in the district is no secret. As a rule, in urban areas an electoral district contains from 5 to 10 housing blocs. Prior to the survey an interviewer can easily list bloc apartments. Actually each apartment can be regarded and is a household unit. When they are listed down, a selection of households can be done.

In rural areas the interviewers have relied and will continue to rely on household books. The book lists all households and their members residing in a given village. It opens the possibility of a systematic selection that would start with the random figure. In practice it is often required

that the data of the household books should be checked and rechecked against someone's inside knowledge. It is not too infrequent that members of the family listed as living in the village are in fact absent. It is often the case with old women who, shunning the fatigue of village life in winter, spend winter months with their relatives in a city.

5 Analysis and Results

5.1 Comparison with Census data

Below is the comparison between some of the demographic characteristics of the achieved sample and those of the operationalized population. The operationalized population is treated as the data coming from the Microcensus of 1994 with relevant subtractions of the groups excluded from the study. It will be assumed that the Census provided what can be termed as "objective data". However, while intended to be a good sample of the population, the one million Census came under harsh criticism from international experts. The samplers paid by the World bank claimed that the MicroCensus can hardly be qualified as a representative study since its sample followed in the footsteps of Soviet tradition and chose respondents in line with industry division rather than through household selection. The only alternative to the Microcensus is the 1989 Census data, but, as has been stated above, they are largely out of date. To counter the above mentioned problems, we shall test the study results not only against the data, but also against another dataset generated by a large-scale RLMS project based on a random probability sample of about 10000 respondents.¹²

The tests of sampling error carried out here compared the proportion of the SMDR and RLMS with a specific demographic proportion of the census data. The proportions are used to calculate a test statistic Z on the basis of the formula:

$$(9) Z = \frac{(P_s - P)}{\sqrt{P(1-P)/n}}$$

Where

P_s = the proportion from the sample

P = the proportion from the population

n = sample size

The null hypothesis is that the differences in the sample can be attributed to sample error. The final columns, then, are the p-values: the probability of obtaining a value of Z at least as extreme under the null hypothesis using a Gaussian distribution (normal).

¹² RLMS (Russian Longitudinal Monitoring Study) is a study gauging income and health characteristics of the Russian population. According to the sample design of RLMS the population is divided into thirty strata and in each stratum numerous PSUs three PSUs are selected. The RLMS targets households rather than individual respondents. Inside a household all respondents are questioned.

Table 7. National comparisons

Parameter	Category	Statistic (%)	SDMR(%)	RLMS (%)	P-value SDMR	P-value RLMS
Gender	Male	46,0	42,7	43,0	0,02	0,00
	Female	54,0	57,3	57,0	0,02	0,00
Age	20-29 years	18,9	19,0	18,4	0,90	0,13
	30-39 years	22,3	20,0	20,6	0,06	0,00
	40-49 years	21,2	23,9	20,3	0,02	0,02
	50-59 years	14,0	13,7	14,4	0,66	0,10
	60 years and older	23,7	23,4	26,2	0,72	0,00
Education	Higher	16,1	18,6	17,4	0,02	0,00
	Unfinished higher	2,1	3,1	0,8	0,02	0,00
	Secondary	54,4	58,8	52,0	0,00	0,00
	Lower	27,2	19,2	29,8	0,00	0,00

The P-values indicate that in most categories the precision of the SDMR was on a par with the RLMS – a much bigger and more expensive survey. The SDMR did better in representing the younger category (20-29 years) and the oldest one (50 years and older). In most basic categories the proportions stay within the 5% margin of error with a 95% confidence interval. There is only one category dramatically undersampled – the category with a low level of education. A closer inspection of the data shows that the undersampling of the category might be linked with the process of operationalization of the population e.g. the exclusion of certain areas where residents with an unfinished secondary education constitute a large part of the population. These are the Caucasian republics, qualified as either inaccessible or hazardous. Indirectly the hypothesis is substantiated by available statistical data: while in Russia as a whole 73,1% of the population living in urban areas, in the Chechen republic it is 34,7%, in the Ingush republic – 41,8%, in Dagestan – 41,8%. A larger rural population tends to be correlated with a larger category an unfinished secondary education.

5.2 Non-response

Non-response is another possible source of bias in any survey. Let us estimate the overall influence of the non-response upon the quality of the data. First, let us suppose that the overall mean for the population would be as follows:

$$(10) Y = PrY_r + P_nY_n$$

where:

Y=mean for the population

Pr=proportion of responses

Pn=proportion of non-response

Y_r=mean for the responses

Y_n=mean for the non-response.

The proportion of responses and non-responses add up to 1.

The estimate for the mean of the non-response stratum of the population is as follows:

$$(11) Y_r - Y = Y_r - (PrY_r + P_nY_n) = Y_r(1 - Pr) - P_nY_n = P_n(Y_r - Y_n).$$

In our case, the total non-response rate amounted to 0,21, so the formula will look as:

$$\text{Non-response bias} = 0,21(Y_r - Y_n).$$

In other words, if, for instance, the average difference of income between responding part of the population and non-response part is equal to 100 rubles, the total impact upon the mean

income would be equal to 21 rubles. In our case the average income is about 400 rubles. The overall impact of non-response would not be conducive to any serious bias.

The problem of non-response is traditionally more acute in Moscow. The losses caused by non-responding residents in Moscow are equal to 28% - a significantly bigger proportion than in the Russian provinces.

6 Conclusion

When a survey is finished, the obvious question of how a better representation could have been achieved is always at the forefront of a researcher's mind. It is obvious that the sample design could have been greatly enhanced by an increase of the sample as well as by more PSUs chosen within every stratum. A better result could have been attained if respondents were paid: such is the policy of the RLMS organizers. However, in all of these instances the budget of the survey would have been bound to dramatically rise. In our view, the design of the sample strikes an equilibrium between the required precision and the chances of collecting a set of representative data characterizing the Russian society at a crucial period of its history.

7 APPENDIX 1. PSUs in the sample

	PSU	Socio-economic zone	Number of households selected	Number of respondents
1	Moscow	Central	182	300
2	S.Petersburg	Central Western	130	301
3	Kurkinsky rayon	Central	51	108
4	Torzhokski rayon	Central	50	101
5	Nelidovo	Central	71	120
6	Eletz	Central Black Earth	69	114
7	Khasanski rayon	East Siberian	52	77
8	Bogotol	East Siberian	56	118
9	Uyarski rayon	East Siberian	36	67
10	Novopokrovski rayon	North Caucasian	47	93
11	Bataisk	North Caucasian	63	132
12	Podporozhie	North Western	48	100
13	Kirillov rayon	Northern	28	57
14	Tunkansi rayon	Northern	33	64
15	Tukaevski rayon	Povolzhski (Volga)	54	81
16	Krasnopartizanski rayon	Povolzhski (Volga)	50	76
17	Balashov	Povolzhski (Volga)	57	79
18	Rtischevo	Povolzhski (Volga)	55	73
19	Novosergeyevski rayon	Ural	43	83
20	Buzuluk rayon	Ural	41	69
21	Blagovarski rayon	Ural	40	90
22	Chelyabinsk	Ural	48	80
23	Emanzhelinsk	Ural	57	104
24	Nizhni Novgorod	Volgo-Vyatski	56	111
25	Kuybishev	West Siberian	50	96
26	Tumen	West Siberian	49	110
	Total		1516	2804

8 APPENDIX 1. Nonresponse

	PSU	Number of respondents	Number of refusals	Number of not-at-homes	Other non-response
1	Moscow	300	68	39	11
2	S.Petersburg	301	3	12	6
3	Kurkinsky rayon	108	0	8	1
4	Torzhokski rayon	101	5	16	2
5	Nelidovo	120	12	15	7
6	Eletz	114	7	4	4
7	Khasanski rayon ¹³	77	4	21	1
8	Bogotol	118	2	0	0
9	Uyarski rayon	67	0	2	0
10	Novopokrovski rayon	93	11	13	5
11	Bataisk	132	1	4	2
12	Podporozhie	100	0	9	0
13	Kirillov rayon	57	1	3	0
14	Tunkansi rayon	64	4	3	3
15	Tukaevski rayon	81	9	26	8
16	Krasnopartizanski rayon	76	18	12	4
17	Balashov	79	11	23	4
18	Rtischevo	73	19	24	3
19	Novosergeyevski rayon	83	7	3	1
20	Buzuluk rayon	69	3	13	2
21	Blagovarski rayon	90	0	7	1
22	Chelyabinsk	80	7	15	2
23	Emanzhelinsk	104	8	7	0
24	Nizhni Novgorod	111	0	11	1
25	Kuybishev	96	0	6	2
26	Tumen	110	2	6	0
	Total	2804	202	302	70

Available data show that the rate of non-response for the SDMR survey is tantamount to 20,5%. The non-response is made of refusals (7,2%), not-at-homes (10,8%) and other losses (sickness, etc.=2,5%). In terms of refusals the survey came out with a good hit rate. The not-at-homes tended to constitute a large part of the population that in itself is a basic characteristic of modern Russian society: massive unemployment forces many Russians to become temporary dwellers of regions other than their own.

¹³ In some PSUs interviewers faced nonresponse caused by a large absentee rate. For instance, in the Khasan rayon a large number of men were sacked from local enterprise and to earn a living had to get jobs as fishermen on the ships of the Far Eastern fleet.
